Open Meetings and Public Hearings....................................2337

LEGISLATIVE
Open Meetings and Public Hearings....................................2338

CHRONOLOGICAL LIST
Open Meetings........................................................................2339
Public Hearings......................................................................2342
The table printed below lists regulation sections, by Virginia Administrative Code (VAC) title, that have been amended, added or repealed in the *Virginia Register* since the regulations were originally published or last supplemented in VAC (the Spring 2005 VAC Supplement includes final regulations published through *Virginia Register* Volume 21, Issue 11, dated February 7, 2005). Emergency regulations, if any, are listed, followed by the designation “emer,” and errata pertaining to final regulations are listed. Proposed regulations are not listed here. The table lists the sections in numerical order and shows action taken, the volume, issue and page number where the section appeared, and the effective date of the section.

TITLE 9. ENVIRONMENT

STATE WATER CONTROL BOARD

Notice of Intended Regulatory Action

Notice is hereby given in accordance with § 2.2-4007 of the Code of Virginia that the State Water Control Board intends to consider amending regulations entitled 9 VAC 25-260, Water Quality Standards. The purpose of the proposed action is to designate two tributaries to the Pedlar River, three tributaries to the North Fork of the Buffalo River and the North Fork of the Buffalo River as exceptional state waters.

The agency intends to hold a public hearing on the proposed regulation after publication in the Virginia Register.

Public comments may be submitted until May 27, 2005.

Contact: David C. Whitehurst, Department of Environmental Quality, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4121, FAX (804) 698-4522 or e-mail dcwhitehurst@deq.virginia.gov.

VA.R. Doc. No. R05-103; Filed March 28, 2005, 11:15 a.m.

† Notice of Intended Regulatory Action

Notice is hereby given in accordance with § 2.2-4007 of the Code of Virginia that the State Water Control Board intends to consider amending regulations entitled 9 VAC 25-820, General Virginia Pollutant Discharge Elimination System (VPDES) Watershed Permit Regulation for Total Nitrogen and Total Phosphorus Discharges and Nutrient Trading in the Chesapeake Bay Watershed in Virginia. The purpose of the proposed action is to establish a general VPDES permit for annual maximum VPDES permitted point source discharge limitations for total nitrogen and total phosphorus to the Chesapeake Bay Watershed and a nutrient trading mechanism.

The agency intends to hold a public hearing on the proposed regulation after publication in the Virginia Register.

Statutory Authority: § 62.1-44.15 of the Code of Virginia.

Public comments may be submitted until June 1, 2005.

Contact: Allan Brockenbrough, Department of Environmental Quality, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4147, FAX (804) 698-4032 or e-mail abrockenbrough@deq.virginia.gov.

VA.R. Doc. No. R05-169; Filed March 30, 2005, 9:42 a.m.

TITLE 22. SOCIAL SERVICES

STATE BOARD OF SOCIAL SERVICES

Notice of Intended Regulatory Action

Notice is hereby given in accordance with § 2.2-4007 of the Code of Virginia that the State Board of Social Services intends to consider amending regulations entitled 22 VAC 40-880, Child Support Enforcement Program. The purpose of the proposed action is to update the current child support regulation impacted by 2003 and 2004 state legislation and to amplify selected sections of the existing regulation. The current regulation encompasses all functions of the child support enforcement program including application, eligibility for services, location, paternity establishment, order establishment, enforcement, collection, distribution and case closure.

The agency does not intend to hold a public hearing on the proposed regulation after publication in the Virginia Register.

Statutory Authority: §§ 63.2-200 and 63.2-217 of the Code of Virginia.

Public comments may be submitted until May 18, 2005.

Contact: Joseph Crane, Assistant Director, Division of Child Support Enforcement, Department of Social Services, 7 N. 8th St., Richmond, VA 23219, telephone (804) 726-7431, FAX (804) 726-7481 or e-mail joseph.craner@dss.virginia.gov.

VA.R. Doc. No. R05-175; Filed April 14, 2005, 9:48 a.m.
**TITLE 4. CONSERVATION AND NATURAL RESOURCES**

**DEPARTMENT OF CONSERVATION AND RECREATION**

**Title of Regulation:** 4 VAC 5-15. Nutrient Management

**Statutory Authority:** § 10.1-104.2 of the Code of Virginia.

**Public Hearing Date:** N/A -- Public comments may be submitted until 5 p.m. on July 1, 2005. (See Calendar of Events section for additional information)

**Agency Contact:** David C. Dowling, Policy, Planning, and Budget Director, Department of Conservation and Recreation, 203 Governor Street, Suite 302, Richmond, VA 23219, telephone (804) 786-2291, FAX (804) 786-6141, or e-mail regcord@dcr.virginia.gov.

**Basis:** Section 10.1-104.2 of the Code of Virginia requires the department to establish criteria for nutrient management plans.

In addition, Article 3 (§ 62.1-44.16 et. seq.) of Chapter 3.1 of Title 62.1 of the Code of Virginia requires the department to adopt and implement additional regulatory or other changes to nutrient management plan criteria by December 31, 2005, that the department concludes are appropriate to better address water quality issues associated with poultry waste.

Also, requirements set forth in 40 CFR Parts 9, 122, 123 and 412 as published in the Federal Register Volume 68, No. 29, dated February 12, 2003, require states to establish for concentrated animal feeding operations (CAFOs) criteria for nutrient management plans that will be required in NPDES permits. Section 412.4(c) stipulates that CAFOs must develop and implement a nutrient management plan that is based on a field specific assessment, that addresses the form, source, amount, timing, and method of application of nutrients on each field to achieve realistic production goals while minimizing nitrogen and phosphorus movement to surface waters. Recent final regulations promulgated by the State Water Control Board in 9 VAC 25-191 and 9 VAC 25-192 require DCR to begin utilizing more stringent phosphorus criteria for nutrient management plans required for State Water Control Board permits for confined animal feeding operations by January 1, 2006. This action was necessary to obtain EPA approval of the Commonwealth’s delegated program for regulating confined animal feeding operations.

**Substance:** Substantive changes are proposed in 4 VAC 5-15-150 A 2 that pertain to nutrient application rates for phosphorus. The existing regulation states that phosphorus application rates should be managed to reduce adverse water quality impacts. The proposed regulation states that phosphorus application rates shall be managed to minimize adverse water quality impacts. The nutrient management planner is given several procedures to determine appropriate rates of phosphorus application, but must select a method for use in each instance and adhere to the criteria.

**Issues:** Nutrient management plans are prepared for the purpose of assisting land owners and operators in the management of the land application of fertilizers, animal manures, municipal sewage sludges, and other nutrient sources for agronomic benefits and for the protection of the Commonwealth’s ground and surface waters. Nutrient application to land is agronomically necessary in many cases for the economically sustainable production of crops. If applied at excessive rates, at improper times, or if misapplied, nutrients can be lost from the root zone in soils and enter ground and surface waters. Excessive nutrient levels in ground or surface waters used for drinking can be harmful to human health if ingested. Drinking water containing above 10 ppm nitrate-nitrogen is believed to cause methemoglobinemia (blue-baby syndrome - a lack of oxygen transport to the brain) in infants. Excessive nutrient runoff into surface waters can
result in algae blooms and depletion of dissolved oxygen, thereby stressing or causing death in fish and other aquatic organisms of commercial, ecological or recreational significance to the Commonwealth. The amended provisions provide increased protections of ground and surface waters, while maintaining efficient crop production techniques that benefit the general public and the farming community.

Disadvantages of the amended provisions are certain impacts to livestock and poultry producers, wastewater treatment plant owners, and sludge land application contractors. The disadvantages to these parties are increased costs of disposal where excess quantities of animal waste or sewage sludge exist. The proposed phosphorus criteria will result in lower waste application rates per acre on many sites. The proposed nitrogen-timing amendments will result in (i) increased costs to develop storage for sewage sludge, (ii) seasonally landfilling sewage sludge when necessary, and/or (iii) utilization of winter cover crops to manage sludge generated at times of the year when agronomic crops do not utilize nitrogen.

The primary advantage to the Commonwealth is increased protection of ground and surface water quality. Another advantage is the contribution of this action to meeting the Commonwealth’s commitments to reduce nutrient loads to the Chesapeake Bay by 2010 to avoid more stringent requirements proposed by EPA if attainment of water quality standards are not realized.

Department of Planning and Budget's Economic Impact Analysis: The Department of Planning and Budget (DPB) has analyzed the economic impact of this proposed regulation in accordance with § 2.2-4007 H of the Administrative Process Act and Executive Order Number 21 (02). Section 2.2-4007 H requires that such economic impact analyses include, but need not be limited to, the projected number of businesses or other entities to whom the regulation would apply, the identity of any localities and types of businesses or other entities particularly affected, the projected number of persons and employment positions to be affected, the projected costs to affected businesses or entities to implement or comply with the regulation, and the impact on the use and value of private property. The analysis presented below represents DPB's best estimate of these economic impacts.

Summary of the proposed regulation. Section 10.1-104.2 of the Code of Virginia requires that the Department of Conservation and Recreation (DCR) operate a voluntary nutrient management training and certification program to certify the competence of persons preparing nutrient management plans (NMP) for the purpose of assisting land owners and operators in the management of land application of fertilizers, municipal sewage sludge, animal manures, and other nutrient sources for agronomic benefits and for the protection of the Commonwealth’s ground and surface waters. Specifically, the code requires DCR to promulgate regulations detailing qualifications and standards by which to deem individuals competent in NMP preparation and providing criteria relating to the development of NMPs for various agricultural and urban agronomic practices. In addition, Chapter 1 of the 1999 Acts of Assembly amended § 62.1-44.17:1.1 of the Code of Virginia to require that DCR, in consultation with the Department of Environmental Quality (DEQ), complete an examination of current developments in scientific research and technology (including a review of land application of poultry waste, soil nutrient retention capacity, and water quality degradation) and adopt and implement appropriate regulatory or other changes, if any, to its NMP program by December 31, 2005.

The proposed regulation (i) modifies phosphorous and nitrogen management criteria for NMPs, (ii) expands training requirements for individuals seeking certification and individuals seeking to renew their certification as a nutrient management planner, and (iii) amends NMP content and procedures in areas other than phosphorus and nitrogen management.

The proposed regulation also provides additional options to satisfy the education and experience requirements for certification or renewal of certification as a nutrient management planner, modifies recordkeeping and reporting requirements for certified nutrient management planners, expands conditions under which certification may be denied, suspended, or revoked, requires nutrient management planners to sign all NMPs prepared by them, restricts NMPs for croplands to a maximum of three years, updates documents incorporated by reference, and specifies the conditions under which NMPs need to be modified immediately. However, none of these changes are expected to have a significant economic impact.

The proposed regulation also adds new language, modifies existing language, and deletes redundant language for the sake of clarity. Other changes such as requiring NMPs for industrial wastes containing nutrients and requiring soil analyses included in NMPs to be conducted by DCR-approved laboratories are intended to make the regulation consistent with current practice and with the Code of Virginia.

Estimated economic impact. NMPs are prepared to manage the land application of fertilizers, sewage sludge or biosolids, manure, and other nutrient sources for agronomic benefits. Nutrients contained in these compounds have the potential to contaminate surface and ground waters through leaching, surface runoffs and soil erosion. Nutrient contamination of surface and ground waters, in turn, has the potential to create serious environmental and health hazards. While the proposed regulation establishes NMP requirements, it does not require the use of NMPs. NMPs are required under other regulations, such as permit regulations governing certain types of animal waste and animal feeding operations and the land application of biosolids and industrial waste. Comparison of the various sources of land-applied organic nutrients in Virginia by DCR indicates that poultry manure supplies the largest proportion of phosphorus and nitrogen for land application, followed by biosolids, dairy manure, and swine manure.

Significant Changes: (1) The proposed regulation modifies phosphorus management criteria for NMPs. It requires phosphorus application rates to be managed such that adverse water quality impacts are minimized. The existing regulation only recommends that phosphorus application rates be managed to reduce adverse water quality impacts and describes planning considerations that help achieve this
Proposed Regulations

The proposed phosphorus and nitrogen application under certain circumstances. The proposed March 16) of organic nutrient sources containing nitrogen than restrictions on winter application (between December 21 and restrictions on applications are to be calculated (the proposed change is in amendments how expected crop yield used to determine nitrogen criteria for NMPs. The timing requirements for nitrogen applications are made more stringent. Both the existing and proposed regulations allow application of nitrogen-containing materials to sites with an actively growing crop or to sites where a crop will be established within 30 days of the nutrient application. However, the proposed regulation places more restrictions on winter application (between December 21 and March 16) of organic nutrient sources containing nitrogen than the existing regulation. The existing regulation allows winter application under certain circumstances. The proposed regulation only allows such applications a maximum of 30 days prior to crop planting for high-risk sites and 60 days prior to crop planting for low-risk sites. Low-risk sites are defined as sites that are not deemed an environmentally sensitive site and that have at least 60% uniform ground cover from an existing actively growing crop. Application of composted nutrient sources having a final carbon to nitrogen ratio of 25:1 or greater are exempt from these requirements.

The proposed regulation also makes a number of other small changes to the nitrogen management criteria. Specifically, it amends how expected crop yield used to determine nitrogen applications are to be calculated (the proposed change is in response to a 2005 Joint Legislative Audit and Review Commission report) and how nitrogen contribution from legumes is to be credited in an NMP. However, according to DCR, neither of these changes is likely to significantly alter current practice.

Economic Costs: The proposed phosphorus and nitrogen management criteria are likely to impose additional costs on the users and suppliers of nutrients containing phosphorus and nitrogen.

According to DCR, manure and biosolids are the primary source of excess phosphorus. Land application of these two sources of nutrients has resulted in phosphorus far in excess of what is required for crop-farming purposes. Lower phosphorus application rates implied by the new phosphorus management criteria could result in farmers having to (i) use commercial fertilizers to supplement their reduced use of manure and biosolids, (ii) lease or purchase additional land for application to substitute for fields with excessive phosphorus or high runoff and soil erosion characteristics, (iii) transport manure and biosolids to more distant fields for application, and (iv) incur additional costs in the development of NMPs.

In the case of manure users and suppliers, DCR believes that the proposed change could affect hog and dairy farmers and some poultry farmers. According to DCR, the hog industry is located primarily in southeast Virginia and the southern piedmont. The farms in southeast Virginia are individually owned and most are likely to be able to balance phosphorus generated in manure with crop utilization. The southern piedmont farms entered the hog business only in the mid-1990s and have generally not reached soil phosphorus levels that would require applications to be restricted. However, some corporate hog farms will need to pursue additional land or install other technology to reduce phosphorus applications. Most dairy farms are expected to control sufficient land area to utilize phosphorus in dairy manure. According to DCR, they are already applying dairy manure at crop removal rates and supplementing nitrogen requirements from other sources. However, they may have to haul manure to more distant fields for land application. Poultry farmers are currently allowed to apply phosphorus at crop removal rates. After October 31, 2005, some poultry farmers will be able to apply phosphorus rates higher than currently allowed. On the other hand, some sites may have to reduce their application of phosphorus. For example, if the phosphorus index procedure for a field indicates 65% or greater phosphorus saturation or if the phosphorus index value is 100 or greater, no phosphorus can be applied to those soils. While the overall impact on poultry farmers is hard to determine with any degree of certainty, DCR expects that more fields will be able to receive higher application rates of phosphorus than fields receiving lower application rates compared to current requirements.

For biosolids users and suppliers, the new phosphorus management criteria are not expected to affect overall application rates. Existing biosolids application sites that exceed phosphorus saturation levels specified in the Virginia Standards and Criteria (2005): 65% for plans developed between December 31, 2005, and December 31, 2010, and 50% after 2010. A single phosphorus application can be recommended for multiple crops as long as the application rate does not exceed the sum of the individual application rates. Due to the more stringent requirements for phosphorus-based nutrient management planning, the proposed regulation amends and clarifies the soil sampling depths for phosphorus soil analysis.

The Virginia Nutrient Management Standards and Criteria (2005) provides the nutrient management planner with several methods by which to determine appropriate rates of phosphorus application: the soil test method, the environmental threshold method, and the phosphorus index method. According to DCR, the soil test method is the most stringent in terms of phosphorus application rates, but the least expensive for nutrient management planners to use. The phosphorus index method is the least stringent in terms of phosphorus application rates, but the most expensive for nutrient management planners to use.

The soil sampling depths are modified from 2”-4” to 0”-4” for untilled fields and from 6”-8” to 0”-6” for tilled fields.

1 The Virginia Nutrient Management Standards and Criteria (2005) provides the nutrient management planner with several methods by which to determine appropriate rates of phosphorus application: the soil test method, the environmental threshold method, and the phosphorus index method. According to DCR, the soil test method is the most stringent in terms of phosphorus application rates, but the least expensive for nutrient management planners to use. The phosphorus index method is the least stringent in terms of phosphorus application rates, but the most expensive for nutrient management planners to use.

2 The soil sampling depths are modified from 2”-4” to 0”-4” for unilted fields and from 6”-8” to 0”-6” for tilled fields.

4 Unlike manure and biosolids, commercial fertilizer can be formulated to match crop needs.

5 Crop farmers are likely to be unaffected by the proposed phosphorus management criteria as they tend to use commercial fertilizer over manure or biosolids.

6 Effective date of a new law requiring that poultry applications conform to the requirements of this regulation.
Nutrient Management Standards and Criteria (2005) will no longer be able to receive land applications. In such instances, new land application sites will have to be found and permitted. As existing permitted land is excluded because of higher phosphorus soil test levels, it will have to be replaced with new land application sites with lower phosphorus saturation levels. Overall, DCR does not expect significant additional acreage being used for the land application of biosolids as a result of the new phosphorus management criteria. However, some farmers currently using biosolids to meet their crop nitrogen needs will no longer be able to do so due to high soil phosphorus saturation levels. Instead, they will have to incur additional costs in supplementing nitrogen from other sources. Others will be able to reduce their need for supplemental nitrogen through the land application of biosolids. Overall, the additional cost to some farmers is likely to be balanced by the cost savings to others. Currently, NMPs are not required for the land application of biosolids. However, the Virginia Department of Health (VDH) is in the process of promulgating regulations that would require NMPs for all such sites. All discussion of costs and benefits of the new phosphorus management criteria relating to biosolids applications are contingent on these regulations eventually being adopted.

(i) DCR estimates that the cost to hog farmers of supplementing nitrogen through the increased use of commercial fertilizers or other nitrogen sources could range from no additional cost to $13 per acre. Any costs associated with supplementing nitrogen would be an additional cost to hog farmers as manure is generally available to them at no cost. (ii) In addition, DCR estimates that more land area may be necessary to utilize excess manure and biosolids. For hog farmers, the agency estimates that 20% more land may be required. There are currently 66 hog operations requiring NMPs, with an average of 176.2 acres receiving manure applications. A 20% increase implies that an additional 35.2 acres would be needed to apply the excess manure. According to DCR, the cost of leasing additional land for application of manure varies between $25 and $50 per acre. In the case of biosolids applicators, they will be required to find additional land for application in order to substitute for existing land application sites with high phosphorus levels. Thus, biosolids applicators will incur additional costs associated with finding new application sites that meet the requirements of this regulation and with obtaining a biosolids land application permit from VDH for the new sites. An estimate of the acreage that will no longer be available for land application of biosolids following the implementation of this regulation is not possible at this time. (iii) Farmers may also incur additional transportation costs associated with moving the manure to more distant fields for application. These costs could be significant due to the bulk and consistency of manure and biosolids. For example, the cost of transporting low-density manure more than short distances from the site of its production sometimes exceeds its nutrient value. (iv) Finally, the proposed phosphorus management criteria could make the preparation of NMPs more complex. DCR estimates that it could cost up to an additional $8 per acre to prepare an NMP meeting these requirements: $8 per acre if the phosphorus index method is used and less than $1 per acre for the two other methods.6

As discussed above, in the case of poultry farmers, the new phosphorus management criteria are likely to provide cost savings. According to DCR, the acreage not able to receive poultry manure due to high phosphorus saturation rates is likely to be small compared to the total acreage receiving poultry manure and more than offset by acreage now able to receive higher rates of poultry manure application. Thus, overall, poultry farmers are likely to reap cost savings through a reduced need for commercial fertilizers and other supplemental nitrogen sources, a reduced need for additional land for utilizing excess phosphorus, and potentially lower transportation costs associated with moving the manure to distant fields for application. Due to the uncertainty surrounding the number of poultry farmers likely to benefit and lose out due to the proposed change, an estimate of the cost savings is not possible at this time.

Users and suppliers of manure and biosolids will also be required to meet more stringent timing requirements for the land application of nutrients containing nitrogen. DCR does not believe that the more stringent requirements will affect overall nitrogen application rates. However, the proposed timing requirements are likely to require users and suppliers of biosolids to curtail their activities during the winter months. According to DCR, the proposed change is not likely to have a significant impact on current practice relating to the use of manure and commercial fertilizers containing nitrogen. While a fair amount of land application of biosolids does occur during the winter months, the same is not true of regulated manure operations. Unlike biosolids, manure applications have been NMP-based for some time, with little or no winter application. As overall application rates are not likely to be affected by the new requirements, the proposed restrictions on winter application of nutrients containing nitrogen is not likely to have a significant effect on users and suppliers of commercial fertilizers.

Restrictions on winter applications of biosolids will require users and suppliers to store the material during the winter months or plant fall-seeded cover crops at winter land application sites. The storage options include landfilling the material and constructing storage facilities. According to DCR, it costs between $30 and $50 per wet ton to landfill biosolids (a high cost option). VDH estimates that construction of storage facilities, mainly temporary storage facilities, meeting the requirements of its proposed regulations costs approximately $500 per hundred tons of stored material. Planting fall-seeded cover crops on winter application sites is an alternative to placing the material in storage. The cost of planting such a crop is estimated at approximately $25 per acre.

In addition to the costs discussed above, implementation of the proposed regulation is likely to impose additional costs on...
The proposed regulation is likely to produce significant environmental and health benefits. Phosphorus and nitrogen contamination of surface and ground water can result in environmental and health hazards.

The environmental hazards arise from the accelerated eutrophication, an increase in the rate of supply of nutrients, of surface water. Eutrophification produces a number of negative environmental consequences that restrict the use of these waters for aesthetics, fisheries, recreation, and industry. These include oxygen depletion (hypoxia), increased turbidity, loss of submerged vegetation, and alteration of food webs. Experiments have shown that either phosphorus or nitrogen may be the limiting nutrient for eutrophication, with phosphorus being the more limiting nutrient in waters with lower salinity and nitrogen being the more limiting nutrient in waters with higher salinity. Moreover, due to the easier identification and control of point sources in recent years, nonpoint sources of phosphorus and nitrogen in agricultural runoff are contributing an increasing proportion of nutrient input. In Virginia, the DEQ estimates that, based on 2002 conditions, approximately 66% of the nitrogen and 76% of phosphorus entering the Chesapeake bay and its tidal tributaries from Virginia can be attributed to nonpoint sources. Boesch et al. (2001) also estimate that agriculture is the single largest source of nitrogen and phosphorus entering the Chesapeake Bay.

Land application of manure and biosolids has resulted in phosphorus far in excess of what is required for farming. According to Sharpley et al. (1994)11, 58% of soil samples in Virginia in 1989 tested high for phosphorus. One of the main reasons for the high phosphorus levels is that nutrient application rates are generally nitrogen based, i.e., based on soil nitrogen content and crop nitrogen requirements. As manure and biosolids tend to have lower nitrogen to phosphorus ratios than taken up by crops, use of both has resulted in phosphorus levels in excess of that required for farming.

Phosphorus loss due to soil erosion and runoff can be reduced by basing applications not just on crop nitrogen requirements and by restricting phosphorus applications on saturated soils. Sharpley et al. (1994) conclude that it is of vital importance that management practices are implemented that minimize phosphorus build up in excess of crop requirements, utilize alternative phosphorus sources and residual soil phosphorus levels, and improve methods to identify soils capable of enriching bio-available phosphorus loss in runoff. The changes to phosphorus application rates being proposed are likely to reduce the actual load of phosphorus entering ground and surface waters.

Winter applications of nutrients containing nitrogen have a high risk of resulting in nitrogen being discharged into surface waters through soil erosion, runoff, and leaching into ground water. However, the major flow path for nitrogen losses is leaching into ground water during winter recharge. Ground water recharge and nitrate leaching for most regions occur mainly in the fall and winter months when crop uptake and evaporation is at its minimum. A study by Weil et al. (1990)12 examined the leaching of nitrogen from fall applications of poultry manure. Four fields in Maryland’s coastal plain were studied: two receiving only fertilizer nitrogen and two receiving poultry manure applications. The study found that nitrate concentration in ground water under the poultry-manured fields was significantly higher between December and March than under fertilizer-only fields. Moreover, results of the study indicated a short residence time for these ground waters, as little residual nitrate from the previous years' manuring was evident. A study by Evanylo (2003)13 looked at the effects of biosolids application timing and soil texture on the availability of nitrogen for corn. The study was based on field experiments conducted on coarse- and fine-textured soils from two farms in the coastal plains of Virginia between 1996 and 1998. The study concluded that, due to winter weather variability, the opportunities for mineralization of nitrogen from winter-applied anaerobically digested biosolids and subsequent transport into ground water can be high in the coastal plains of Virginia.

Nitrogen loss through leaching and runoff can be reduced by placing restrictions on winter applications and by the use of fall and winter cover crops. A study conducted by Staver and Brinsfield (1998)14 concluded that applying organic nitrogen sources in early fall can result in dramatic increases in nitrate leaching losses during the following winter and that cereal grain winter cover crops were effective in reducing nitrate leaching rates. Thus, the proposed changes to nitrogen application timing are likely to reduce the actual load of nitrogen entering ground and surface waters.

In addition to the environmental effects discussed above, the proposed changes are likely to produce health benefits. Excessive nutrient levels in surface and ground water used for drinking can be harmful to human health. For example, drinking water containing over 10 parts per million of nitrate-nitrogen is believed to cause methemoglobinemia15 in infants. Pregnant women, adults with reduced stomach acidity, and people deficient in certain types of enzymes are also...

---

15 A lack of oxygen transport to the brain.
susceptible to nitrite-induced methemoglobinemia. Thus, reducing the amount of nitrogen entering drinking water sources is likely to produce health benefits for the state.

Virginia is committed to reducing nutrient and sediment levels in the Chesapeake Bay as part of the 2000 Chesapeake Bay agreement and the 2000 six-state memorandum of understanding with the Environmental Protection Agency (EPA). In May 1999, EPA placed most of Virginia’s portion of the Chesapeake Bay and several of its tidal tributaries on the impaired waters list. The 2000 Chesapeake Bay agreement set a goal of removing these waters from the list of impaired water bodies for nutrients and sediments by 2010. The changes to the phosphorus and nitrogen criteria in the proposed regulations are necessary to bring the effectiveness of NMPs to the level assumed in the Chesapeake Bay model used to develop Virginia’s tributary strategies. The Chesapeake Bay model used in the tributary strategies to track progress in meeting phosphorus and nitrogen reductions and to project nutrient reductions assumes that phosphorus application rates and nitrogen application timing are being optimized.

Reductions in the phosphorus application rate and restrictions on winter applications of nutrients containing nitrogen are likely to reduce the risk of runoff of phosphorus and nitrogen to surface waters and leaching of these nutrients into ground water. Existing literature indicates that there are significant environmental benefits from reducing nutrient discharge into surface waters, including benefits to public health, commercial fisheries, tourism and recreation, property values in surrounding areas, and the regional economy in general. Refer to the economic impact analysis of proposed regulations 9 VAC 25-40 (Policy for Nutrient Enriched Waters) and 9 VAC 25-720 (Water Quality Management Planning Regulation) for a detailed discussion of the environmental benefits accruing from surface water quality improvements in general and from reducing phosphorus and nitrogen loading in Chesapeake Bay and its tidal tributaries in specific. Any estimate of the benefits is subject to great uncertainty and such estimates in existing literature cover a wide range of values. However, despite covering a wide range of values, estimates of the benefits of reducing nutrient discharge into surface waters are generally significant. For example, recreational use benefits for the Chesapeake Bay area as a whole from a 40% reduction in nitrogen and phosphorus concentrations is estimated to be in the millions of dollars. A 60% improvement in water quality is estimated to have provided annual recreation use benefits to people living in Washington, D.C., Virginia, and portions of Maryland ranging from the millions to the billions of dollars.

The net economic impact of the new phosphorus and nitrogen management criteria will depend on the relative magnitude of the costs and benefits associated with the proposed changes. Precise estimates of the costs and benefits are not possible at this time. Cost estimates are subject to uncertainty as identification of affected entities and the additional costs/cost savings accruing to these entities cannot be estimated with any reasonable degree of confidence. For example, the tributary strategies estimate the cost of implementing agricultural best management practices in Chesapeake Bay and its tidal tributaries, but these costs are not related specifically to changes in the proposed regulations. Similarly, a precise estimate of the benefits is also not possible at this time. For example, the tributary strategies specify the percentage of total nitrogen and phosphorus loading into the Chesapeake Bay and its tidal tributaries attributable to agriculture. However, the amount of the reductions in these nutrients resulting from the new phosphorus and nitrogen management practices is not known. Thus, given the many large uncertainties, it is not possible at this time to make a sound determination of the net economic impact of the proposed change. However, both the costs and benefits are likely to be large and the net economic impact, whether positive or negative, is not likely to be very large.

(2) The proposed regulation expands training requirements for individuals seeking initial certification or seeking to renew their certification. Applicants for initial certification will now be required to take examinations that address phosphorus nutrient management planning methods and assessment techniques and timing of nitrogen applications. DCR anticipates approximately six hours of additional training. Applicants are expected to incur additional costs of $30 each in obtaining the required training. DCR receives approximately 46 first-time applications for certification each year (based on the average number of applicants in 2002, 2003, and 2004). Thus, the additional requirements would cost applicants a total of $1,380 per year. Renewal requirements for individuals certified prior to the effective date of the proposed regulation have also been expanded to include additional training in phosphorus nutrient management planning methods and assessment techniques. DCR anticipates between four to six hours of additional training. The cost to participants includes a $20-$25 registration fee. According to DCR, there are currently 290 certified nutrient management planners operating in the state. Thus, the additional requirements would impose a one-time cost of between $5,800 and $7,250 on individuals certified prior to the effective date of this regulation. In addition to the cost of the training itself, the proposed change is also likely to impose some additional economic costs. The time taken to meet the training requirements must be valued as time that would have otherwise been used for productive activities. Thus, the proposed change will result in lost income for the applicant.

---

18 The signatories to the 2000 Chesapeake Bay agreement were Pennsylvania, Maryland, Virginia, Washington, D.C., the Chesapeake Bay Commission, and EPA. However, in a separate six-state memorandum of understanding with EPA, New York, Delaware, and West Virginia also made the same commitment.

21 Assuming that all applicants decide to take the additional training prior to appearing for the examination.
Proposed Regulations

during the time they are in training. Hourly wages for a certified nutrient management planner range from $10 to over $19. Finally, the proposed change is also likely to impose some travel-related costs, including costs related to traveling to and from the training center and the cost of any overnight stays.

The expanded training requirements are also likely to impose additional costs on DCR. For initial certification training, teaching costs are estimated at approximately $164 per hour or $984 for six hours. DCR is also likely to incur costs associated with providing materials and handouts, renting a facility in which to hold the training, and copying and postage. Currently, DCR incurs approximately $2,700 in material costs, $1,650 in facility costs, and $175 in copying and postage costs for a four-day training session (24 hours of training) for 28 individuals. Based on these costs, an additional six hours of training will cost approximately $1,131. Finally, DCR is expected to incur costs in terms of staff time devoted to developing presentations and teaching aids. Based on the amount of staff time spent on the four-day training session, the proposed change will require 46 additional hours of DCR staff time. At an average of $34 an hour, it would cost DCR an additional $1,564 to provide the additional training. DCR offers initial certification training twice a year. Thus, the increase in initial training requirements will cost the agency over $7,000 a year. DCR estimates that the additional training required for renewal of certification will cost the agency $580 in facility rental and other costs. In addition, it will require 45 hours of staff time. Thus, this change will impose a one-time cost of $2,110 on the agency. The net economic impact of the proposed change will depend on whether the costs of additional training are greater than or less than the benefits accruing from it. By ensuring that individuals certified as nutrient management planners are able to implement the requirements of the regulation, the proposed regulation will reduce the risk of phosphorus and nitrogen loss to surface and ground waters. As discussed in the previous section, reducing phosphorus and nitrogen loss to surface and ground waters will, in turn, produce significant environmental and health benefits for the state. The net economic impact of the proposed change will depend on the relative magnitude of these benefits. While a precise estimate of the benefits is not possible at this time, the net economic impact of the proposed change, whether positive or negative, is not likely to be very large.

(3) The proposed regulation expands the plan content of NMPs in areas other than phosphorus and nitrogen management. It adds several elements to the list of features that must be indicated on aerial maps contained in NMPs. While some of these elements relate to the new phosphorus management criteria, the remaining are based of recommendations of the 2005 Joint Legislative Audit and Review Commission (JLARC) report. The report recommends that NMPs be consistent with statutory requirements and include a site map indicating the location of waste storage facilities and fields where waste is to be applied. In addition, the report recommends that site maps identify environmentally sensitive sites and buffer areas in the acreage to be managed. The additional detail on site maps recommended by the JLARC report will add planning time for on-site investigations and map production. DCR estimates that the proposed change could increase planning costs by approximately $1 per acre.

The proposed regulation also makes a number of other changes to NMP content and procedures. It requires NMPs to include potassium soil analysis results and potassium application rates consistent with recommendation contained in the Virginia Nutrient Management Standards and Criteria (2005). However, this requirement is not likely to impose significant additional costs as laboratories currently report this information when conducting phosphorus soil analysis. It requires NMPs to include lime recommendations to adjust soil pH to an agronomic level appropriate for existing or planned crops. DCR does not believe that this requirement will have a significant effect on current practice, as there have been very few instances of soil pH rising to above the appropriate agronomic level. It tightens application requirements for secondary nutrients and micronutrients and modifies organic nutrient source analysis requirements for NMPs. However, DCR does not believe that these changes will impose significant additional costs.

The additional costs associated with these changes should be balanced with the potential benefits accruing from them. These requirements are intended to ensure that agricultural practices are conducted in a manner that is protective of the environment and of public health. By tightening the nutrient application and reporting requirements to be included in NMPs, the proposed regulation reduces the risk of nutrient loss from agricultural operations. The net economic impact of the proposed changes will depend on the relative magnitude of the costs and benefits associated with these changes. The only significant additional cost appears to be from the extra detail required on site maps. These costs are likely to be counterbalanced by the benefits to the environment and public health of better management of agricultural operations and better enforcement of existing rules and regulations. Due to the uncertainty associated with any benefits estimate, it is not possible to determine the extent to which the additional costs will be counterbalanced by the additional benefits. However, the net economic impact of the proposed change, whether positive or negative, is not likely to be very large.

Other Changes:

The proposed regulation makes a number of other changes. However, these changes are not likely to have significant economic impact.

- The proposed regulation provides additional options to satisfy the education and experience requirements for certification or renewal of certification as a nutrient management planner, including allowing continuing education units obtained in Delaware to be counted towards continuing education requirements required to renew certification. To the extent that these options increase flexibility for individuals seeking to be certified or seeking to renew certification without having a detrimental

---

Secondary nutrients (such as sodium, calcium, and magnesium) and micronutrients (such as zinc) are essential for plant life, but are required in much smaller quantities than primary nutrients such as phosphorus, nitrogen, and potassium.
The proposed regulation modifies recordkeeping and reporting requirements for certified nutrient management planners and conditions under which certification may be denied, suspended, or revoked. To the extent that these changes improve implementation and enforcement of existing laws and regulations, they are likely to produce some small economic benefits.

The proposed regulation requires all nutrient management planners to sign NMPs prepared by them. According to DCR, the proposed change is necessary for additional accountability and to deal with problems encountered when computer files specific to a plan have been shared by two or more certified planners. To the extent that the proposed change improves implementation and enforcement of existing laws and regulations, they are likely to produce some small economic benefits.

The proposed regulation restricts NMPs for croplands to a maximum of three years. Existing regulations state that NMPs for cropland should not exceed three years. DCR is currently required to approve NMPs for animal waste permits and has been limiting the life of these NMPs to three years or less. The agency believes that most cropland NMPs are presently three years or less.

The proposed regulation updates documents incorporated by reference. For example, reference to the Virginia Nutrient Management Standards and Criteria is updated to the 2005 version. According to DCR, apart from changes that reflect the new nitrogen and phosphorus criteria, the 2005 version contains technical updates to the version referenced in the existing regulation. None of the new and updated references are expected to have a significant economic impact.

The proposed regulation specifies the conditions under which NMPs need to be modified immediately. According to DCR, the proposed change is intended to highlight serious situations needing immediate attention, such as when additional imported manure, biosolids, or industrial waste that was not identified in an existing NMP is to be applied. None of these changes are expected to have a significant impact. However, to the extent that they allow for pressing problems to be dealt with in an expedient manner, they could produce some economic benefits.

The remaining changes are even more minor in nature. New language is added, existing language is modified, and redundant language is deleted for the sake of clarity. Other changes such as requiring NMPs for industrial wastes containing nutrients and requiring soil analyses included in NMPs to be conducted by DCR-approved laboratories are intended to make the regulation consistent with current practice and with the code of Virginia.

Businesses and entities affected. The proposed regulation affects the users and suppliers of manure and biosolids. According to DCR, there currently are 1,260 dairy, beef, swine, and poultry farmers regulated under State Water Control Board permits. In addition, there are nine sewage sludge applicators, 35 sewage treatment plants land applying biosolids, and 30 land applicators of industrial waste.

The proposed regulation also affects individuals certified or seeking to be certified as nutrient management planners. According to DCR, there currently are 290 certified planners operating in the state. In addition, the agency receives approximately 46 new applications for certification per year (based on the average for 2002, 2003, and 2004).

Localities particularly affected. The proposed regulation applies to all localities in the Commonwealth. However, localities generating biosolids for land application are likely to be more affected than others. According to DCR, there currently are 35 sewage treatment plants in the state that land-apply biosolids. These localities are likely to incur additional costs in acquiring supplementary land for application, storing the material, or planting fall-seeded cover crops. DCR estimates that, in total, it will cost these localities approximately $500,000 per year in meeting the new phosphorus and nitrogen management criteria.

However, the additional cost to some localities is likely to be counterbalanced by the additional benefits to other localities. Localities where biosolids land application sites are located will reap environmental and health benefits from the more stringent requirements. In Virginia, 200,000 dry tons of biosolids were land applied on 42,000 acres of land in 2002.

Projected impact on employment. The proposed regulation could affect employment in some parts of the farming industry. Apart from the costs associated with meeting the new NMP requirements, the cost associated with the additional training requirements for nutrient management planners is also likely to be passed on to farmers in the form of increased NMP preparation costs. Overall, the increased costs to farmers and land applicators could reduce profitability in the farming-related sector, potentially reducing the number of people employed in this sector.

On the other hand, the proposed regulation could have a beneficial effect on employment in industries such as commercial fisheries, tourism and recreation, and boat building and repairs that are likely to benefit from improvements in water quality. Related support and value-added industries are, in turn, also likely to reap benefits and this could have a beneficial effect on employment in these industries.

Effects on the use and value of private property. The proposed regulations are likely to impose additional costs on some farming-related businesses and entities. These businesses are likely to incur additional costs in meeting the requirements of this regulation. This, in turn, is likely to increase operating costs and lower the asset value of these businesses.

On the other hand, the proposed regulations are likely to have a positive effect on businesses involved in industries such as commercial fisheries, tourism and recreation, and boat building and repairs that are likely to benefit from improvements in water quality. Improved water quality is likely
Proposed Regulations

to increase revenues and raise the asset value of these businesses. In addition, improvements in water quality and any subsequent increase in economic activity in surrounding areas could also have a positive impact on related support and value-added industries and on property values in the area.

Agency's Response to the Department of Planning and Budget's Economic Impact Analysis: The department is in general agreement with the economic impact analysis prepared by the Department of Planning and Budget.

Summary:
The proposed amendments (i) modify phosphorous and nitrogen management criteria for nutrient management plans; (ii) expand training requirements for individuals seeking certification and individuals seeking to renew their certification as a nutrient management planner; (iii) modify the nutrient management plan content and procedures in areas other than phosphorus and nitrogen management; (iv) provide additional options to satisfy the education and experience requirements for certification or renewal of certification as a nutrient management planner; (v) modify recordkeeping and reporting requirements for certified nutrient management planners; (vi) expand conditions under which certification may be denied, suspended, or revoked; (vii) require nutrient management planners to sign all nutrient management plans prepared by them; (viii) restrict nutrient management plans for croplands to a maximum of three years; (ix) update documents incorporated by reference; and (x) specify the conditions under which nutrient management plans need to be modified immediately.

4 VAC 5-15.10. Definitions.
The words and terms used in this chapter shall have the following meanings unless the context clearly indicates otherwise.

"Application rate" or "nutrient rate" means the quantity of major nutrients, nitrogen as N, phosphorus as P2O5, and potassium as K2O on a per acre basis to supply crop or plant nutrient needs, and to achieve realistic expected crop yields.

"Band" or "sideband" means the placement of fertilizer approximately two inches to the side and two inches below the seed.

"Best management practice" means a conservation or pollution control practice that manages soil, nutrient losses, or other potential pollutant sources to minimize pollution of water resources, such as split applications of nitrogen, or use of cereal grain cover crops to trap available nitrogen and reduce soil erosion.

"Biosolids" means a sewage sludge that has received an established treatment for required pathogen control and is treated or managed to reduce vector attraction to a satisfactory level and contains acceptable levels of pollutants, such that it is acceptable for use for land application, marketing, or distribution in accordance with 12 VAC 5-585-46 et seq., Biosolids Use Regulations of the Board of Health.

"Broadcast" means the uniform application of a material over a field.

"Calibration" means the systematic determination of the operational parameters, such as speed and quantity delivered, of application equipment.

"Cereal crop" or "small grain" means barley, rye, triticale, or wheat.

"Certified nutrient management planner" or "nutrient management planner" or "planner" means the person or persons who prepare nutrient management plans under these regulations a person who holds a current Virginia nutrient management certificate of competence.

"Cool season grass" means grass species of temperate zone origin which exhibit the greatest rates of dry matter production in the day/night temperature range of 60°F to 80°F and includes fescues, bluegrasses, and ryegrasses. Examples of cool season grasses include fescue, bluegrass, and ryegrass.

"Commonwealth" means the Commonwealth of Virginia.

"Composted organic nutrient source" means the relatively stable, humus-like product resulting from the controlled aerobic, thermophilic biological decomposition of organic material that bears little physical resemblance to the raw materials from which it originated and having a final carbon to nitrogen ration of 25:1 or greater.

"Cover crop" means a crop including, but not limited to, cereal grains, which is planted following the harvest of the preceding crop for the purpose of:

1. Seasonal protection of soil, or
2. Assimilation of residual soil nitrogen left from a previous crop or from continued mineralization of nitrogen.

"Crop" means cultivated plants or agricultural produce such as grain, silage, forages, oilseeds, vegetables, fruit, nursery stock, or turfgrass.

"Cropland" means land used for the production of grain, oilseeds, silage, industrial crops, and any other category of crop not defined as specialty crop, hay, or pasture.

"Crop nutrient needs" means the primary nutrient requirements of a crop determined as pounds of nitrogen as N, phosphorus as P2O5 , and potassium as K2O required for production of an expected crop yield based upon soil analysis results as specified in Virginia Nutrient Management Standards and Criteria, revised 2005, or Virginia Commercial Vegetable Production Recommendations for 2004.

"Crop nutrient removal" means the amount of nutrients per acre expected to be taken up by a plant and removed from the site in the harvested portion at the expected yield level, generally expressed as tons per acre or bushels per acre, at rates specified in Virginia Nutrient Management Standards and Criteria, revised 2005.

"Crop rotation" means a method of maintaining and renewing the fertility of a soil by the successive planting of different crops on the same land.
"Department" means the Department of Conservation and Recreation.

"Double crop" means the production and harvesting of two crops in succession within a consecutive 12-month growing season.

"Dry manure" or "semisolid manure" means manure containing less than 85.5% moisture.

"Environmentally sensitive site" means any field which is particularly susceptible to nutrient loss to groundwater or surface water since it contains, or drains to areas which contain, sinkholes, or where at least 33% of the area in a specific field contains one or any combination of the following features:

1. Soils with a leaching index above 10 high potential for leaching based on soil texture or excessive drainage;
2. Sinkholes;
3. Shallow soils less than 41 inches deep likely to be located over fractured or limestone bedrock;
4. Subsurface tile drains;
5. Soil with high potential for subsurface lateral flow based on soil texture and poor drainage;
6. Floodplains as identified by soils prone to frequent flooding in county soil surveys; or
7. Lands with slopes greater than 15%.

"Expected crop yield" means a realistic crop yield for a given farm field determined by using yield records or soil productivity information.

"Fertilizer" means any organic or inorganic material of natural or synthetic origin that is added to a soil to supply certain nutrients essential to plant growth.

"Field" means a unit of contiguous nonwooded land generally used for crop production that is separated by permanent boundaries, such as fences, permanent waterways, woodlands, crop lines not subject to change because of farming practices, and other similar features or as determined by the United States Department of Agriculture Farm Service Agency.

"Field identification number" means a number used by a farmer (or the United States Department of Agriculture Farm Service Agency) to distinguish or identify the location of a field on a farm.

"Groundwater" means any water beneath the land surface in a water saturated layer of soil or rock.

"Grid soil sampling" means a process whereby farm fields or other areas are subdivided into smaller areas or squares for the purpose of obtaining more detailed soil analysis results.

"Hay" means a grass, legume, or other plants, such as clover or alfalfa, which is cut and dried for feed, bedding, or mulch.

"Hydrologic soil group" means a classification of soils into one of four groups, A, B, C, or D, according to their hydrologic properties, ranging from low runoff potential (high infiltration potential) in group A to high runoff potential (low infiltration potential) in group D.

"Incorporation" means the process whereby materials are mixed into soils and not exposed on the soil surface, such as would be achieved by disking one time to a depth of six inches.

"Industrial waste" means liquid or other waste resulting from any process of industry, manufacture, trade or business, or from the development of any natural resources.

"Irrigation" means the application of water to land to assist in crop growth.

"Irrigation scheduling" means the time and amount of irrigation water to be applied to an area for optimum crop growth and to minimize leaching and runoff.

"Leaching" means the movement of soluble material, such as nitrate, in solution through the soil profile by means of percolation.

"Legume" means a plant capable of fixing nitrogen from the atmosphere such as peas, beans, peanuts, clovers, and alfalfas.

"Legume nitrogen credit" means the amount of nitrogen a legume is expected to supply to a succeeding crop.

"Liming" means the application of materials containing the carbonates, oxides, or hydroxides of calcium or magnesium in a condition and in a quantity suitable for neutralizing soil acidity.

"Liquid manure" means manure containing at least 85.5% moisture or which can be applied through subsurface injection or surface application with liquid application equipment.

"Livestock" means domesticated animals such as cattle, chickens, turkeys, hogs, and horses raised for home use or for profit.

"Manure" or "animal waste" means animal fecal and urinary excretions and waste by products which may include spilled feed, bedding litter, soil, lactase, process wastewater, and runoff water from animal confinement areas.

"Mehlich I" means a specific soil analysis procedure developed by North Carolina State University to determine extractable levels of certain nutrients in soils.

"Micronutrient" means a nutrient necessary only in extremely small amounts for plant growth.

"Mineralization" means the process when plant unavailable organic forms of nutrients are converted to a plant available inorganic state as a result of soil microbial decomposition.

"No-till" means the soil is left undisturbed from the time of harvest or the chemical killing of the preceding crop or cover crop until and including the time of planting of the current crop except for strips up to 1/3 of the row width that are disturbed by coulters or disk openers during the planting operation.

"NRCS" means the United States Department of Agriculture, Natural Resource Conservation Service, formerly the Soil Conservation Service (SCS).
"Nutrient" means an element or compound essential as raw materials for plant growth and development such as carbon, nitrogen, and phosphorus.

"Nutrient content" means the percentage of any primary nutrients such as nitrogen as N, phosphorus as P₂O₅, and potassium as K₂O contained in any type or source of plant nutrients.

"Nutrient management plan" or "plan" means a plan prepared by a Virginia certified nutrient management planner to manage the amount, placement, timing, and application of manure, fertilizer, biosolids, or other materials containing plant nutrients in order to reduce pollution nutrient loss to the environment and to produce crops.

"Nutrient Management Training and Certification Fund" means the fund established by § 10.1-104.2 of the Code of Virginia to support the department's Nutrient Management Training and Certification Program.

"Organic nutrient source" or "organic source" means manure, biosolids, sludge, industrial waste, green manure, compost, or other plant or animal residues which contain plant nutrients.

"Organic residuals" means nutrients released over time from manure, biosolids, industrial wastes, legumes, or other organic sources of nutrients.

"Pasture" means land which supports the grazing of animals for forages.

"Person" means an individual, corporation, partnership, association, a governmental body and its subordinate units, a municipal corporation or any other legal entity.

"Plant available nutrients" means the portion of nutrients contained in nutrient sources which is expected to be available for potential use by plants during the growing season or the crop rotation.

"Pre-sidedress nitrogen test (PSNT)" or "PSNT" means a procedure used to help determine soil nitrogen level nitrate-nitrogen levels during a crop growing season.

"Primary nutrients" means nitrogen as N, phosphorus as P₂O₅, and potassium as K₂O.

"Residual nutrients" means the level of nitrogen, phosphorus, and potassium remaining or available in the soil from previously applied nutrient sources, or unharvested plants or plant parts, or baseline nutrient levels in the soil.

"Runoff" means that part of precipitation, snow melt, or irrigation water that runs off the land into streams or other surface water which can carry pollutants from the land.

"RUSLE2" means the USDA - NRCS Revised Universal Soil Loss Equation Version 2 software package.

"Secondary nutrient" means calcium, magnesium, or sulfur.

"Sewage sludge" or "sludge" means any solid, semisolid, or liquid residues which contain materials removed from municipal or domestic wastewater during treatment including primary and secondary residues. Other residuals or solid wastes consisting of materials collected and removed by sewage treatment, septic, and portable toilet wastes are also included in this definition. Liquid sludge contains less than 15% dry residue by weight or can be applied through subsurface injection or surface application with liquid application equipment. Dewatered sludge contains 15% or more dry residue by weight.

"Shall" means a mandatory requirement.

"Should" means a recommendation.

"Slope" means the degree of deviation of a surface from horizontal, measured as a percentage, as a numerical ratio, or in degrees.

"Sidedress" means the placement of fertilizer beside or between the rows of a crop after crop emergence.

"Sinkhole" means a depression in the earth's surface caused by dissolving of underlying limestone, salt, or gypsum having drainage patterns through underground channels.

"Slowly available nitrogen" means nitrogen sources that have restricted availability involving compounds which dissolve slowly, materials that must be microbially decomposed, or soluble compounds coated with substances highly impermeable to water such as urea formaldehyde based water insoluble nitrogen, sulfur coated urea, and natural organics.

"Soil erosion" or "erosion" or "soil loss" means the wearing away of the land surface by water, wind, or waves.

"Soil management group" means a grouping of soils based on their similarity in profile characteristics which affect crop production and require specific soil and crop management practices.

"Soil nitrate leaching index" means the potential for a given soil to be subject to nitrate leaching below the root zone.

"Soil pH level" means the negative logarithm of the hydrogen-ion activity of a soil which measures the relative acidity or alkalinity of the soil. The pH level affects the availability and plant utilization of nutrients.

"Soil productivity group" means a grouping of soils based on expected yield levels for a given crop type.

"Soil series" means a classification of a specific soil type by name based on the chemical and physical properties of the soil.

"Soil survey" means a published or unpublished document developed by a governmental entity which includes detailed descriptions and classifications of soils, mapping of various soil series, and the interpretation of soils according to their adaptability for various crops and trees.

"Specialty crop" means vegetables, tree crops, perennial vine crops, ornamentals, horticultural crops, and other similar crops.

"Split application" means utilizing a sequence of two or more nutrient applications, separated by approximately three weeks.
or more, to a single crop in order to improve nutrient uptake efficiency.

"Surface water" means all water whose surface is exposed to the atmosphere.

"Tilled" means soil is disturbed between the time of harvest of the preceding crop through the time of planting of the current crop in that greater than 1/3 of the row width is disturbed by tillage implements such as moldboard plows, chisel plows, subsoilers, disks, field cultivators, roto-tillers, coulters or disk openers.

"Tilling" is the formation of lateral shoots from the auxiliary buds of small grains and grasses.

"Tissue test" means an analysis of crop tissue for the percentage of nitrogen at key growth stages, and used as an "Tissue test" means an analysis of crop tissue for the percentage of nitrogen at key growth stages, and used as an intensive nutrient management technique with small grain crops.

"Topdress" means broadcast applications of fertilizer on crops such as small grains or forage after crop emergence has occurred.

"Trap crop" means a timely planted cereal crop for the purposes of capturing residual soil nitrogen and nitrogen that is released during the decomposition of manure or biosolids in order to manage limited manure or sewage sludge storage availability.

"Turfgrass" means selected grass species planted or sodded and managed for such uses as home lawns, golf courses, office parks and rights-of-way.

"Volatilization" means a process by which nitrogen is lost to the atmosphere as ammonia gas.

"Warm season grass" means a grass species of tropical origin that exhibits the highest rate of dry matter production in the day/night temperature range of 90°/79°F at a minimum to a maximum of 97°/88°F. Examples of warm season grasses include zoysia and bermuda grasses.

"Water insoluble nitrogen" or "WIN" means a urea formaldehyde based slowly available nitrogen listed on fertilizer bags and reported as a percentage.

"Watershed" means a drainage area or basin in which all land and water areas drain or flow toward a central collector such as a stream, river, or lake at a lower elevation.

"Watershed code" means the letter and number used by the department to identify a watershed or hydrologic unit area.

"Zadoks' growth stage" means the numerical scale ranging from 0-93 which assigns values to small grain growth stages, e.g. Growth Stage 30 is just prior to the stem elongation phase in wheat growth.

4 VAC 5-15-40. Eligibility requirements.

A. Certification may be obtained by satisfying all of the following requirements for certification:

1. Satisfactorily completing and submitting to the department an application in the form required by the department, including a statement of any felony convictions. Such application shall be submitted to the department at least 30 days before the approved examination date set by the department. The application shall request information relating to the person's education, work experience, knowledge of nutrient management, and willingness to abide by the requirements of these regulations;

2. Supplying proof of meeting one of the following:

   a. A copy of a college transcript indicating completion of a college degree with a major in an agriculturally related area with coursework in the area of nutrient management such as soils, soil fertility, and plant science, and one year of practical experience related to nutrient management planning or implementation of nutrient management concepts and principles acceptable to the department, or

   b. A combination of education to include nutrient management related educational courses or training and a minimum of three years of practical experience related to nutrient management planning or implementation of nutrient management concepts and principles acceptable to the department;

3. Obtaining a passing score on each of the essential components parts of the nutrient management certification examination administered by the department; and

4. Submitting a $100 certification fee by check or money order to the department.

B. Certificates shall be valid for two years and will expire on the last day of the expiration month. Certified nutrient management planners or applicants shall notify the department of any change in mailing address within 30 days of such change in address.

C. Individuals certified as nutrient management consultants by the State of Maryland or certified as nutrient management specialists by the Commonwealth of Pennsylvania will be eligible for certification in Virginia by complying with all requirements of these regulations except for subdivision A 2 of this section. These individuals may also substitute, for the requirements in 4 VAC 5-15-60 C, the attainment of a passing score on a Virginia specific examination component which shall include at a minimum the elements listed in 4 VAC 5-15-60 C 9 and C 10. The department, upon review, may accept or approve nutrient management certification programs of other states as satisfying partial requirements for certification.

4 VAC 5-15-60. Examination.

A. The department shall administer nutrient management certification examinations at least once per year. The examinations shall require a demonstration of the ability to prepare a nutrient management plan. The department may limit the number of applicants taking the examination based upon available examination space.

B. Applicants for certification shall achieve a passing score on each of the essential components parts of the nutrient management certification examination to become eligible for certification.
To address nutrient management on urban land uses, nutrient management shall address the elements listed below.

C. The examinations for persons involved in agricultural nutrient management shall address the elements listed below.

1. General understanding of overall nutrient management concepts such as nutrient cycling on farms, the purpose of nutrient management planning, economic aspects of nutrient use, and components of a nutrient management plan;

2. Basic soil science concepts such as soil physical and chemical properties including texture, structure, organic matter, and horizon development, and how such characteristics influence crop productivity and adaptation, water runoff, and infiltration;

3. Environmental management concepts such as the water cycle, nutrient loss mechanisms, environmental effects of nutrients in waters including Chesapeake Bay, identification of high risk sites relating to nutrient use and appropriate nutrient management practices to reduce nutrient losses;

4. Nutrient sampling, testing, and analysis such as basic sampling procedures, relationship of soil test level with the likelihood of crop response, soil nitrate testing, manure and biosolids sampling and interpretation, and determining nitrogen supplied by legumes;

5. Basic soil fertility concepts such as relationship of soil pH to nutrient availability and toxicity, essential elements for crop growth, limiting factors to crop production, cation exchange capacity and related concepts, nutrient cycles, and forms of nutrients in soils;

6. Fertilizer management concepts such as types of fertilizers, nutrient analysis of common materials and grades, basic calculations and blending, calibration of equipment, and application methods;

7. Manure management concepts such as nutrient content and volume produced, determination of plant available nutrients, selecting sites for manure application, proper timing and placement, coordination of fertilizers with manure, application methods and calibration;

8. Biosolids management concepts such as determination of plant available nutrients, nutrient content, forms of nutrients, types of sludges, coordination with fertilizer applications, and application methods;

9. Nutrient management training and certification regulatory requirements, and requirements of other nutrient management related laws, regulations, and incentive programs; and

10. Development of multiple components of nutrient management plans and completion of calculations comparable to development of nutrient management plans such as, but not limited to, determination of specific soil types in fields, determination of specific nutrient requirements based on soil productivity and soil analysis results, evaluation of field limitations based on environmental hazards or concerns, timing of nitrogen applications, phosphorus nutrient management planning methods and assessment techniques, and interpretation of manure analysis results.

D. An individual who is unable to take an examination at the scheduled time shall notify the department at least five days prior to the date and time of the examination; such individual will be rescheduled for the next examination. The department may consider accepting notice of less than five days due to individual hardship situations on a case-by-case basis. Failure to notify the department may require the individual to submit a new application and payment of fees in accordance with 4 VAC 5-15-40.

E. The department shall establish acceptable passing scores for the examinations based on the department's determination of the level of examination performance required to show minimal acceptable competence.

F. All applicants shall be notified of results in writing within 60 days of the completion of the examinations.

The department will not renew a certificate if a proceeding to deny certification under 4 VAC 5-15-110 has begun, or if the department has found that the applicant violated any requirements of this chapter. A certificate is issued for two years and may be renewed on or before the expiration of a certificate by complying with all of the following requirements:

1. Submittal of a renewal application on the form the department requires;

2. Payment of a $100 renewal fee to the department;

3. Submittal of proof of satisfactory completion of at least four hours of continuing education pre-approved by the department within the past two years. Requests for pre-approval of continuing education courses must be received at least 60 days prior to the expected course date or dates and must include a detailed syllabus indicating time to be spent on each topic area covered. Continuing education hours must be in subject matter consistent with 4 VAC 5-15-60 C. Department personnel may attend continuing education sessions to verify that the requirements are met. Proof of attendance must be verified by the course provider. The department may accept continuing education units obtained in Delaware, Maryland and Pennsylvania if such continuing education units are specifically for the purpose of recertification in the state nutrient management certification program; and

4. Completion of at least one nutrient management plan or completion of four hours of continuing education pre-approved by the department within the past two years in addition to the requirements of subdivision 3 of this section.

Persons certified prior to [the effective date of this regulation] shall attend a department approved training course in phosphorus nutrient management planning methods and assessment techniques prior to certificate renewal. The training course hours may be applied toward other continuing education requirements of this subsection.
4 VAC 5-15-100. Recordkeeping and reporting requirements.

A. Certified nutrient management planner reporting requirements. A person who holds a certificate under these regulations shall keep records and file with the department by September 30 of each year an annual activity report on a form supplied by the department covering the previous year (July 1 through June 30). The annual activity report shall contain the following information:

1. Name and certificate number of the certified nutrient management planner;
2. Any change of mailing address during the previous year;
3. Number of nutrient management plans completed;
4. Acreage covered by plans and planned acreage by county and state watershed codes specified by plan categories of new or revised;
5. Breakdown of planned acreage by cropland, hay, pasture, and specialty crops by county and watershed code specified by plan categories of new or revised; and
6. Other information indicating number of practices facilitated by the planner such as manure testing and use of the PSNT.

B. Certified nutrient management planner recordkeeping requirements. The department may periodically inspect nutrient management plans prepared by certified persons and required records for the purpose of review for compliance with 4 VAC 5-15-140 and 4 VAC 5-15-150. A certified nutrient management planner shall maintain the following plan records for a period of not less than three years from the date the plan was prepared:

1. A complete copy of each nutrient management plan prepared and shall make such plans available for inspection by department personnel upon request within two weeks one week of receiving such request;
2. Records for each plan with all of the following information if the information is not already contained in the plan:
   a. Representative soil analysis results for fields, or field grids if grid soil sampling is used, dated not more than three years prior to the date the nutrient management plan was completed to include information on soil fertility levels for phosphorus and potassium, and pH level;
   b. Copies of soil survey maps or a soil survey book containing maps for each field unless a soil survey has not been published for the county;
   c. Yield records for each field to include calculations used to determine the planning yield if upward adjustments to soil productivity based yields were made to more than 20% of the fields covered by the plan;
   d. Type and number of livestock, if any, as well as a description of the livestock to include average weight;
   e. Calculations or records indicating annual quantity of manure produced or expected to be produced; and
   f. Organic nutrient source analysis, if applicable, to include information on percentage of moisture, total nitrogen or total Kjeldahl nitrogen, ammonium nitrogen, total phosphorus, and total potassium.
3. A summary listing of all plans prepared to include landowner or operator's name and the date the plan was prepared or revised.

4 VAC 5-15-110. Compliance with regulations and disciplinary action.

If the department finds that a certified person or an applicant for certification violated any requirements of this chapter, including the circumstances listed below, the department may deny, suspend or revoke certification, following the informal fact-finding procedures of the Virginia Administrative Process Act (§ 9.1-14:1-2.2-4000 et seq. of the Code of Virginia).

1. Providing misleading, false, or fraudulent information in applying for a certificate;
2. Providing the department with any misleading, false, or fraudulent report;
3. Offering or preparing a nutrient management plan claimed to be prepared by a person certified as a nutrient management planner in Virginia as provided by these regulations without a certificate;
4. Offering or preparing, modifying, or revising a nutrient management plan that does not comply with the requirements of these regulations;
5. Failing to promptly provide any report or to allow the department access to inspect any records required to be kept by these regulations;
6. Failing to provide the department with a copy of a nutrient management plan within two weeks following the modification of any plan required by regulations promulgated under § 32.1-164.5 of the Code of Virginia for sewage sludge, § 62.1-44.17:1 of the Code of Virginia for animal waste, or § 62.1-44.17:1.1 of the Code of Virginia for poultry waste; or
7. Conviction of a felony related in any way to the responsibilities of a certified nutrient management planner.

4 VAC 5-15-130. Duties of other state agencies. (Repealed.)

The provisions of this chapter shall not limit the powers and duties of other state agencies.

4 VAC 5-15-140. Nutrient management plan content.

A. A certified nutrient management planner shall prepare nutrient management plans which contain the information in subsections B through G of this section. For nutrient management plans covering nonagricultural, specialty land uses, for example residential lawns, office parks, and golf courses, the department may specify additional plan elements which are critical to the management of nutrients for a particular activity, and may eliminate requirements not pertinent to nonagricultural land uses.
Proposed Regulations

B. Plan identification. Each plan shall be identified by a single cover sheet indicating:

1. Farmer/operator name and address;
2. Name and certificate number, and signature of the certified nutrient management planner that prepared the plan;
3. County and watershed code of land under the nutrient management plan;
4. Total acreage under the plan with double cropped acreage accounted for only once;
5. Acreage of cropland, hay, pasture, and specialty crops included in the plan for the first year of the plan;
6. Date the plan was prepared or revised; and
7. Type and approximate number of livestock, if applicable.

C. Map or aerial photograph.

1. Each plan shall contain a map or aerial photograph to identify:
   a. The farm location and boundaries;
   b. Individual field boundaries where nutrients will be applied; and
   c. Field numbers and acreages where nutrients will be applied;
   d. Environmentally sensitive sites as defined in 4 VAC 5-15-10;
   e. Setback areas for nonapplication for manure and biosolids as specified in 4 VAC 5-15-150 A 5 e;
   f. Location of manure, biosolids, or waste storage if any; and
   g. Intermittent or perennial streams and buffers (if the phosphorus index is used to determine phosphorus application rates).
2. The map or aerial photograph shall be legible, with the features in subdivision 1 of this subsection recognizable. A farm sketch or soil survey map may be used when a map or aerial photograph is not available, if the features described in subdivision 1 of this subsection are recognizable.

D. Summary of nutrient management plan recommendations. Each plan shall contain one or more summary sheets that list the following information for each field:

1. Name of the farmer/operator;
2. Field identification numbers to include the United States Department of Agriculture Farm Service Agency tract and field numbers;
3. Field acreages;
4. Expected crops or crop rotations;
5. Crop nutrient needs per acre based on soil analysis results and soil productivity;
6. Legume nitrogen credits per acre;
7. Available nutrients in soil from previous crop and mineralization of organic residuals;
8. Recommended organic nutrient source application rates in tons per acre or 1,000 gallons per acre; plant available nitrogen as N, phosphorus as P2O5, and potassium as K2O per acre; and spreading schedule to include approximate months of application;
9. Expected days for incorporation of organic nutrient sources into the soil if organic nutrient sources will be used;
10. Commercial fertilizer rates and timing of applications, including split applications of nitrogen and the possible use of soil nitrogen test results on a field before sidedressing with nitrogen.
11. Numerical phosphorus and potassium soil analysis results expressed as ppm P and K, pounds per acre P and K or pounds per acre P2O5 and K2O for all fields in the plan.

E. Individual fields may be grouped together if similar soil productivity levels, soil fertility levels, and environmentally sensitive site features exist pertaining to subsection D of this section.

F. Each plan shall also contain the following information in summary or narrative form:

1. Identification and management of environmentally sensitive sites;
2. Quantities of manure produced on the farm, available manure storage capacity, and manure analysis;
3. Total manure used as crop nutrients, if any, including manure from both on farm and off farm sources based on plan recommendations and total land requirements for manure utilization;
4. Quantity of unused manure, if applicable, and recommendations on appropriate use options;
5. Liming recommendations if soil pH is below the optimal range;
6. Recommendations or fact sheets to ensure efficient application of fertilizers and organic nutrient sources and other best management practices to reduce the potential for the degradation of surface and groundwater quality, which may include but are not limited to:
   a. Equipment calibration;
   b. Application timing and method;
   c. Crop rotation and agronomic practices;
   d. Soil nitrate testing; and
   e. Cover crop management;
7. Information on maintaining and updating a nutrient management plan. General comments about plan maintenance shall include:
a. The length of time the plan is effective, not to exceed five years, from the date the plan is developed, consistent with 4 VAC 5-15-150 D 1; and

b. Identification of circumstances or changes in the farm operation such as an increase in animal numbers that would require the plan to be updated prior to the time specified in this subdivision 7;

8. Expected crop yields for each field for the planned crop rotation;

9. The following information for all fields where the phosphorus applications are based on the phosphorus index:

   a. Functioning riparian buffer widths and distances to surface waters in feet;
   b. Presence of any contour planting at a maximum of 1.0% row grade, strip cropping, conservation tillage with greater than 30% residue, or terraces;
   c. Percentage of required ground cover on pastures stated as <50% cover, 50-75% cover, or >75% cover; and
   d. Crop tillage type for each crop stated as either no-till or tilled for all cropland; and
   e. If expected soil erosion for the phosphorus index was developed using RUSLE2, a copy of the RUSLE2 Profile Erosion Calculation Record computerized print-out indicating: (i) crop(s) for each year in the crop rotation specified by calendar year to match those identified in the nutrient management plan, (ii) all mechanical field operations, and (iii) edge of field soil loss for each field; and

G. The nutrient management planner should incorporate additional plan requirements as appropriate if required by other specific legislative, regulatory or incentive programs which apply to a specific operator.

4 VAC 5-15-150. Required nutrient management plan procedures.

A. Nutrient application.

1. A certified nutrient management planner shall include, in each plan, nutrient application practices for each field in the plan. The nutrient application rates shall be calculated for nitrogen (N), phosphate (P₂O₅), and potash (K₂O). Individual field recommendations shall be made after considering nutrients contained in fertilizers, manure, biosolids, industrial wastes, legumes in the crop rotation, crop residues, residual nutrients, and all other sources of nutrients. Individual fields may be grouped together if similar soil productivity levels, soil fertility levels, and environmentally sensitive site features exist.

2. Nutrient application rates.

   a. Determination of crop nutrient needs shall be consistent with tables and procedures contained in Virginia Nutrient Management Standards and Criteria, revised November 1995, 2005 and the Commercial Vegetable Production Recommendations, 1996 2004 (Virginia Cooperative Extension Publication 456-420), and shall be based on soil test results for P₂O₅ and K₂O.

b. Nitrogen applications rates in nutrient management plans shall not exceed crop nutrient needs in subdivision 2 a of this subsection and phosphorus application rates should be managed to reduce adverse water quality impacts. Whenever possible, phosphorus applications from organic nutrient sources should not exceed crop needs based on a soil test over the duration of the crop rotation. If this is not possible, preference should be given to routing phosphorus in organic nutrient sources to fields having the lowest phosphorus soil analysis, fields to be rotated into crops such as alfalfa hay, or fields with predominately A and B slopes as identified in a soil survey.

c. Phosphorus application rates shall be managed to minimize adverse water quality impacts consistent with subdivisions 2 c (1) through (4) of this subsection.

   (1) Phosphorus applications from inorganic nutrient sources shall not exceed crop nutrient needs over the crop rotation based on a soil test.

   (2) Phosphorus applications shall not be included in nutrient management plans for soils exceeding specified phosphorus saturation levels as listed in Virginia Nutrient Management Standards and Criteria, revised 2005, regardless of the outcome of other procedures specified in this subsection. The specified phosphorus saturation levels pertain to the following plan development dates: (i) 65% for plans developed after December 31, 2005 through December 31, 2010; and (ii) 50% for plans developed after December 31, 2010.

   (3) Whenever possible, phosphorus applications from organic nutrient sources should not exceed crop needs based on a soil test over the duration of the crop rotation. If this is not possible, maximum phosphorus application rates and phosphorus control practices contained in nutrient management plans shall be consistent with the phosphorus management provisions.
Proposed Regulations

contained in Virginia Nutrient Management Standards and Criteria, revised 2005.

(4) A single phosphorus application may be recommended to address multiple crops in the crop rotation identified within the timeframe covered by the nutrient management plan consistent with 4 VAC 5-15-150 D 1 if the single application does not exceed the sum of the appropriate application rates for individual crops as determined by subdivisions 2 c (1) through (3) of this subsection.

d. Recommended application rates for potassium, secondary nutrients, and micronutrients should be at agronomically or economically justifiable levels for expected crop production. Potassium applications sufficient to meet crop nutrient needs shall be included in nutrient management plans for all fields consistent with recommendations contained in Virginia Nutrient Management Standards and Criteria, revised 2005.

e. Expected crop yield shall be determined from past crop yields or soil productivity on a given field. The farmer's past experience with crop yields in specific fields may be used to make reasonable adjustments to expected crop yields in lieu of verifiable yield records provided the upward adjustments impact no more than 20% of the fields on a particular farm. The calculation of expected crop yield shall:

(1) Be an average of the three highest yielding years taken from the last five years the particular crop was grown in the specific field, or

(2) Be based on and consistent with soil productivity information contained in Virginia Nutrient Management Standards and Criteria, Revised November 1995.

e. Expected crop yield shall be determined from any of the following methods on a given field:

(1) Soil productivity group expected crop yields based on and consistent with soil productivity information contained in Virginia Nutrient Management Standards and Criteria, revised 2005;

(2) The farmer's past experience with crop yields in specific fields may be used to make reasonable adjustments to expected crop yields in subdivision 2 e (1) of this subsection in lieu of verifiable yield records provided the upward adjustments impact no more than 20% of the fields on a particular farm and the expected crop yields do not exceed the soil productivity group rating of any soil series that directly adjoins the soils contained in the specific field as indicated in the soil survey; or

(3) Verifiable past crop yields are utilized to determined expected crop yield. The calculation of expected crop yield shall be an average of the three highest yielding years taken from the last five years the particular crop was grown in the specific field.

f. Representative soil analysis results for fields shall be determined by using standard soil sampling and analysis methods according to Agronomy Monograph #9, American Society of Agronomy Methods of Soil Analysis, Part 3, Chemical Methods, 1996 utilizing the Mehlich I extraction procedure for phosphorus or other methods and laboratories approved by the department and correlated to Mehlich I and utilizing correlation procedures contained in Virginia Nutrient Management Standards and Criteria, revised November 1995 2005. Soil analysis results shall be dated no more than three years prior to the beginning date of the nutrient management plan. A single composite soil sample should represent an area up to approximately 20 acres. Fields such as those common to strip cropping may be combined when soils, previous cropping history, and soil fertility are similar. Representative soil sample cores shall be obtained from the soil surface to a depth of two to four inches (0-4”) for fields which are not tilled that have not been tilled within the past three years, and from the soil surface to a depth of six to eight inches (0-6”) for fields which are tilled or have been tilled within the past three years. Soil sampling of fields based on grids of subfield areas may be utilized.

g. For existing operations, the most recent organic nutrient source analysis results or an average of past nutrient analysis results should for the specific operation within the last three year period shall be used to determine the nutrient content of organic nutrient sources. Manure analyses shall include percent moisture, total nitrogen or total Kjeldahl nitrogen, ammonium nitrogen, total phosphorus, and total potassium determined using laboratory methods consistent with Recommended Methods of Manure Analysis, publication A3769, University of Wisconsin, 2003 or other methods approved by the department. For plans on new animal waste facilities, average values analyses published in Virginia Nutrient Management Standards and Criteria, revised November 1995 2005, should be utilized unless proposed manure storage and treatment conditions warrant the use of alternative data. Plant available nutrient content shall be determined using the mineralization rates and availability coefficients found in Virginia Nutrient Management Standards and Criteria, revised November 1995 2005, for different forms and sources of organic nutrients. Mineralization of organic nutrients from previous applications shall be accounted for in the plan.

h. The expected nitrogen contributions from legumes shall be credited when determining nutrient application rates at levels which substantially conform to those listed in Virginia Nutrient Management Standards and Criteria, revised November 1995 2005.

3. Soil pH influences nutrient availability and crop nutrient utilization and should be adjusted to the level suited for the crop. Nutrient management plans shall contain lime recommendations to adjust soil pH to a level within the appropriate agronomic range for the existing crop or crop(s) to be grown. Recommendations shall address lime application if soil pH is below the optimal range. Nutrient management planners shall not recommend the application of lime, lime-amended materials, or nutrient sources that are expected to raise the soil pH to a level that exceeds the appropriate agronomic range for the growing crop or crop(s)
to be grown based on recommendations contained in Virginia Nutrient Management Standards and Criteria, revised 2005.

4. Nutrient application timing.

a. Timing recommendations for nutrient applications sources containing nitrogen shall be as close to plant nutrient uptake periods as reasonably possible. A certified nutrient management planner shall utilize procedures contained in Virginia Nutrient Management Standards and Criteria, revised 2005, to determine the timing of nutrient applications. To reduce the potential for nutrient leaching or runoff, a certified nutrient management planner shall recommend planting an agronomically feasible crop applications of nitrogen-containing materials only to sites where an actively growing crop is in place at the time of application or where a timely planted crop will be established within 30 days of the planned nutrient application if no actively growing crop is in place. For organic nutrient sources, planned applications may be recommended between December 21 and March 16, if necessary, if a crop will be planted within 30 days of the planned nutrient application. If a subsequent pass across a field is necessary to achieve the desired application rate, the plan will allow for sufficient drying time. Application rates utilizing nonirrigation liquid spreading methods shall not exceed the hydraulic loading capacity of the soil at the time of each application. If a subsequent pass across a field is necessary to achieve the desired application rate, the plan will allow for sufficient drying time.

b. d. The nutrient management planner shall recommend split application of inorganic nitrogen fertilizers as starter or broadcast and sidedressing or top dressing in row crops and small grains consistent with procedures contained in Virginia Nutrient Management Standards and Criteria, revised November 1995, on environmentally sensitive sites as identified in 4 VAC 5-15-10. Split applications of inorganic nitrogen fertilizers and irrigation scheduling shall be recommended for crops to receive irrigation. The use of a pre-sidress nitrogen test (PSNT) can help to determine additional nitrogen needs during the growing period. In lieu of split applications, the planner may recommend the application of the total nitrogen requirement for spring-planted row crops within one week prior to planting if at least 50% of the plant available nitrogen requirement of the crop is supplied with slowly available nitrogen sources.

c. e. Nutrient applications on frozen or snow covered grounds should be avoided ground shall not be recommended in nutrient management plans. If an emergency situation such as storage system freeze-up necessitates the application of organic nutrient sources, select fields which have the planner may advise the producer to apply no more than 40 pounds of plant available nitrogen per acre and deduct the applied nitrogen from other planned applications for the current or next crop if the field has (i) slopes of less than 6.0% which are either planted in cover crops or have significant crop residue present 6.0%; (ii) 60% uniform ground cover from an existing actively growing crop such as a small grain trap crop or fescue with exposed plant height of three inches or more; (iii) a minimum of a 200-foot vegetated or adequate crop residue buffer between the application area and all surface water courses; and (iv) soils characterized by USDA as "well drained."

5. Application method for nutrients.

a. The application of nitrogen containing materials shall be managed to minimize runoff, leaching and volatilization losses.

b. Applications of liquid manures or sludges utilizing irrigation shall not be recommended to be applied at hydraulic rates above those contained in Virginia Nutrient Management Standards and Criteria, revised November 1995, 2005.

c. Plans shall not recommend liquid manure or sludge application rates utilizing nonirrigation liquid spreading equipment which exceed 14,000 gallons per acre (approximately one-half (0.5) inch) per application. The amount of liquid manure or sludge application in plans will not exceed the hydraulic loading capacity of the soil at the time of each application. If a subsequent pass across a field is necessary to achieve the desired application rate, the plan will allow for sufficient drying time.
d. Where possible, the planner should recommend that biosolids, industrial wastes and manures be incorporated or injected in the crop root zone in order to reduce losses of nitrogen to the atmosphere and to increase the plant available nitrogen to phosphorus ratio of these nutrient sources relative to crop nutrient needs. Lime stabilized biosolids should not be injected due to the creation of a localized band of high soil pH unless subsequent practices are utilized, such as diskling, in order to adequately mix the soil.

e. The planner shall recommend buffer zones setbacks around wells, springs, surface waters, sinkholes, and rock outcrops where manure or, biosolids, or industrial waste should not be applied. Such buffer zones setbacks recommended shall be consistent with criteria contained in Virginia Nutrient Management Standards and Criteria, revised November 1995, 2005, unless alternative setbacks or buffers are specified in regulations or permits pertaining to the site. For sites impacted by other regulations or permits, the planner shall include the setbacks and buffers specified in regulations promulgated under § 32.1-164.5 of the Code of Virginia for sewage sludge, § 62.1-44.17:1 of the Code of Virginia for animal waste, § 62.1-44.17:1.1 of the Code of Virginia for poultry waste, and Chapter 21 § 10.1-2100 et seq.) of Title 10.1 of the Code of Virginia for sites in Chesapeake Bay Preservation areas, and permits for industrial waste land application. The land area within setback and buffer areas shall be deducted from field acreage to determine usable field acreage for nutrient application in nutrient management plans.

B. Manure production and utilization.

1. The planner shall estimate the annual manure quantity produced on each farm utilizing tables and forms contained in Virginia Nutrient Management Standards and Criteria, revised November 1995, 2005, or from actual farm records of manure pumped or hauled during a representative 12-month period.

2. The nutrient management plan shall state the total amount of manure produced and the amount that can be used on the farm, utilizing the information and methods provided in the Virginia Nutrient Management Standards and Criteria, revised November 1995, 2005. The plan shall discuss any excess manure and shall provide recommendations concerning options for the proper use of such excess manure.

C. Plans shall identify and address the protection from nutrient pollution of environmentally sensitive sites.

D. Plan maintenance and revisions.

1. A site-specific nutrient management plan developed in accordance with all requirements of these regulations, including specified crops or crop rotations, shall provide information on soil fertility and seasonal application of required nutrients for one to five years of crop production. Plans developed for a period of time greater than three years and up to five years should generally be limited to sites in permanent pasture or continuous hay rotations.

2. The plan shall indicate state a need for immediate modification if cropping systems, rotations, fields, (i) animal numbers are to increase above the level specified in the plan, (ii) animal type or management types including intended market weights are to be changed, added or removed. The planner shall state in the plan that such plan will be invalid if (iii) additional imported manure, biosolids, or industrial waste that was not identified in the existing plan is to be applied to fields under the control of the operator, or (iv) available land area for the utilization of manure decreases below the level necessary to utilize manure in the plan, or if changes in animal numbers or type affect land area necessary to utilize manure. The plan shall also state a need for modification if cropping systems, rotations, or fields are changed and phosphorus will be applied at levels greater than crop nutrient needs based on soil analysis as determined from procedures in Virginia Nutrient Management Standards and Criteria, revised 2005.

3. Adjustments to manure production and application should be made if there are increases in animal numbers or changes in how animal waste is stored or applied, or when there are changes in nutrient content of manure resulting from changing feed rations, animal types, or new sampling and analysis for nutrient content and application rate calculations.

4. Soil analysis shall be recommended for each field at least once every three years to determine the soil fertility and pH, and to update the nutrient management plan.

5. Manure analysis shall be recommended before field application until a baseline nutrient content is established for the specific manure type on the corresponding farm operation. After a baseline nutrient content is established, a manure analysis shall be recommended at least once every three years for dry or semisolid manures, and at least once every year for liquid manures.

6. Modified top dressing or sidedressing application rates of nitrogen may be recommended if a pre-sidedress nitrogen test (PSNT) administered during the growing season indicates different levels of nitrogen than planning time calculations if the use of the PSNT and interpretation of the test results are consistent with Virginia Nutrient Management Standards and Criteria, revised 2005.

TITLE 9. ENVIRONMENT

STATE WATER CONTROL BOARD

Statutory Authority: § 62.1-44.15 of the Code of Virginia; Clean Water Act (33 USC § 1313(e)); 40 CFR Part 130.

Public Hearing Dates:
June 8, 2005 - 1:30 p.m. (Roanoke)
June 6, 2005 - 2 p.m. (Harrisonburg)

Public comments may be submitted until July 1, 2005.
(See Calendar of Events section for additional information)

Agency Contact: Bryant Thomas, Department of Environmental Quality, 13901 Crown Court, Woodbridge, VA 22193, telephone (703) 583-3843, FAX (703) 583-3841, or e-mail bthomas@deq.virginia.gov.

Basis: Sections 62.1-44.15 and 62.1-44.19:7 of the Code of Virginia give the State Water Control Board the authority to adopt TMDLs and to establish policies and programs for effective areawide and basinwide water quality control and management. The code also authorizes the board to develop pollution abatement and water quality control plans.

Water Quality Management Plans are required by § 303(e) of the Clean Water Act (33 USC § 1313(e)) as implemented by 40 CFR Part 130.

Purpose: The State Water Control Board proposes to amend the Potomac-Shenandoah River Basin section (9 VAC 25-720-50 B) of the state’s Water Quality Management Plan Regulation (9 VAC 25-720). This section (9 VAC 25-720-50 B) serves as a repository for those waste load allocations not developed in the Total Maximum Daily Load (TMDL) process. The proposed amendment is needed to standardize the format and update the data and information contained in the regulation to reflect the advances in technology and changing water quality conditions. This amendment is needed to provide consistency with VPDES permits and other water quality management programs. Obsolete information will also be removed from the regulation.

Substance: The Potomac-Shenandoah River Basin (9 VAC 25-720-50 B) section of the Water Quality Management Plan Regulation (9 VAC 25-720) needs a standard format and outdated waste load allocations need to be updated. Obsolete information needs to be deleted from the regulation.

Issues: The amendment to provide a consistent format and data is a benefit for the public interested in the pollutant loads and allocations for Virginia’s streams. Also, the amended regulation will contain current information that is a benefit to all users. The one possible disadvantage to some citizens is that some information not required by the statutory and regulatory authorizations is being eliminated in the amendment. This information will be moved into the nonregulatory river basin plan.

Department of Planning and Budget’s Economic Impact Analysis: The Department of Planning and Budget (DPB) has analyzed the economic impact of this proposed regulation in accordance with § 2.2-4007 H of the Administrative Process Act and Executive Order Number 21 (02). Section 2.2-4007 H requires that such economic impact analyses include, but need not be limited to, the projected number of businesses or other entities to whom the regulation would apply, the identity of any localities and types of businesses or other entities particularly affected, the projected number of persons and employment positions to be affected, the projected costs to affected businesses or entities to implement or comply with the regulation, and the impact on the use and value of private property. The analysis presented below represents DPB’s best estimate of these economic impacts.

Summary of the proposed regulation. The General Assembly authorizes the State Water Control Board in § 62.1-44.15 of the Code of Virginia to adopt regulations deemed necessary to enforce the general water quality management program of the board. Water quality management plans are required under § 303 (e) of the federal Clean Water Act.

The proposed regulation amends the section of the existing water quality planning regulation that deals with the Potomac-Shenandoah River Basin. It establishes a standard format for the presentation of data, removes outdated and antiquated information and requirements, and updates waste load allocations to reflect the current waste load allocation in a discharger’s Virginia Pollution Discharge Elimination System (VPDES) permit.

Estimated economic impact. The proposed regulation amends the section of the existing water quality planning regulation dealing with the Potomac-Shenandoah River Basin. It establishes a standard format for the presentation of data. According to the Department of Environmental Quality (DEQ), the proposed regulation was promulgated a few years ago to replace 18 separate water quality planning regulations, each with a different format for data presentation. These regulations were grouped together by river basin and incorporated into the proposed regulation. The proposed change is intended to standardize the format for data presentation across all nine river basins. The proposed regulation also removes outdated and antiquated information...
Proposed Regulations

and requirements from the existing regulation. For example, the consolidation of wastewater treatment plants over the past few years has led to some of the smaller treatment facilities shutting down. The proposed regulation is updated to reflect these and other such changes. Finally, the proposed regulation updates the nonTMDL\(^1\) waste load allocation of facilities discharging into the Potomac-Shenandoah River Basin. These are updated to reflect the current waste load allocation as established in a discharger’s VPDES permit.

As none of the proposed changes are likely to affect current practice, the proposed regulation is not likely to have a significant economic impact. According to DEQ, the intent of the proposed regulation is to present all information relevant to water quality management planning in the Potomac-Shenandoah River Basin in one place. In the absence of this regulation, this information would have to be collected from individual VPDES permits. To the extent that the proposed changes update the regulation to reflect current conditions and practice and, thus, improve understanding and implementation of the regulation, it could produce some economic benefits.

Businesses and entities affected. There are currently 11 facilities with nonTMDL waste load allocations discharging into the Potomac-Shenandoah River Basin.

Localities particularly affected. The proposed regulation applies to all localities in the area of the Potomac-Shenandoah River Basin. However, the proposed regulation is not likely to have a significant impact on these localities.

Projected impact on employment. The proposed regulation is not likely to have a significant impact on employment in the Commonwealth.

Effects on the use and value of private property. The proposed regulation is not likely to have a significant impact on the use and value of private property.

Agency's Response to the Department of Planning and Budget's Economic Impact Analysis: The department has reviewed the economic impact analysis prepared by the Department of Planning and Budget and has no comment.

Summary:

*The proposed amendment to the Potomac-Shenandoah River Basin section (9 VAC 25-720-50 B) establishes a standard format for data presentation and updates the data and information contained in this portion of the regulation to provide consistency with the current VPDES permits.*

---

\(^1\) Total Maximum Daily Load

EDITOR'S NOTE: 9 VAC 25-720-50 A is not amended; therefore, the text is not set out. 9 VAC 25-720-50 B is stricken in its entirety and is not set out. New text for 9 VAC 25-720-50 B is set out below.

B. Non-TMDL waste load allocations.

Agency Contact: Jason R. Hill, Department of Environmental Quality, 3019 Peters Creek Road, Roanoke, VA 24019, telephone (540) 562-6724, FAX (540) 562-6729, or e-mail jrhill@deq.virginia.gov.

Basis: Sections 62.1-44.15 and 62.1-44.19:7 of the Code of Virginia give the State Water Control Board the duty and authority to adopt TMDLs and to establish policies and programs for effective areawide and basinwide water quality control and management. The code also authorizes the board to develop pollution abatement and water quality control plans.

Water Quality Management Plans are required by § 303(e) of the Clean Water Act (33 USC § 1313(e)) as implemented by 40 CFR Part 130.

Purpose: The State Water Control Board proposes to amend the Roanoke River Basin section (9 VAC 25-720-80 B) of the state's Water Quality Management Plan Regulation (9 VAC 25-720). This section (9 VAC 25-720-80 B) serves as a repository for those waste load allocations not developed in the Total Maximum Daily Load (TMDL) process. The proposed amendment is needed to standardize the format and update the data and information contained in the regulation to reflect the advances in technology and changing water quality.
Proposed Regulations

conditions. This amendment is needed to provide consistency with VPDES permits and other water quality management programs. Obsolete information will also be removed from the regulation.

Substance: The Roanoke River Basin (9 VAC 25-720-80 B) section of the Water Quality Management Plan Regulation (9 VAC 25-720) needs a standard format and outdated waste load allocations need to be updated. Obsolete information needs to be deleted from the regulation.

Issues: The amendment to provide a consistent format and data is a benefit for the public interested in the pollutant loads and allocations for Virginia’s streams. Also, the amended regulation will contain current information that is a benefit to all users. The one possible disadvantage to some citizens is that some information not required by the statutory and regulatory authorizations is being eliminated in the amendment. This information will be moved into the nonregulatory river basin plan.

Department of Planning and Budget’s Economic Impact Analysis: The Department of Planning and Budget (DPB) has analyzed the economic impact of this proposed regulation and the General Assembly has reviewed the economic impact analysis prepared by the Department of Planning and Budget (DPB) and has no comment.

Agency’s Response to the Department of Planning and Budget’s Economic Impact Analysis: The department has reviewed the economic impact analysis prepared by the Department of Planning and Budget and has no comment.

Summary: The proposed amendment to the Roanoke River Basin section (9 VAC 25-720-80 B) establishes a standard format for data presentation and updates the data and information contained in this portion of the regulation to provide consistency with the current VPDES permits.

Businesses and entities affected. There are currently 27 facilities with nonTMDL waste load allocations discharging into the Roanoke River Basin.

Locality particularly affected. The proposed regulation applies to all localities in the area of the Roanoke River Basin. However, the proposed regulation is not likely to have a significant impact on these localities.

Projected impact on employment. The proposed regulation is not likely to have a significant impact on employment.

Effects on the use and value of private property. The proposed regulation is not likely to have a significant impact on the use and value of private property.

The proposed regulation also removes outdated and antiquated information and requirements from the existing regulation. For example, the consolidation of wastewater treatment plants over the past few years has led to some of the smaller treatment facilities shutting down. The proposed regulation is updated to reflect these and other such changes. Finally, the proposed regulation updates the nonTMDL waste load allocation of facilities discharging into the Roanoke River Basin. These are updated to reflect the current waste load allocation as established in a discharger’s VPDES permit.

As none of the proposed changes are likely to affect current practice, the proposed regulation is not likely to have a significant economic impact. According to DEQ, the intent of the proposed regulation is to present all information relevant to water quality management planning in the Roanoke River Basin in one place. In the absence of this regulation, this information would have to be collected from individual VPDES permits. To the extent that the proposed changes update the regulation to reflect current conditions and practice and, thus, improve understanding and implementation of the regulation, it could produce some economic benefits.

Estimated economic impact. The proposed regulation amends the section of the existing water quality planning regulation dealing with the Roanoke River Basin. It establishes a standard format for the presentation of data, removes outdated and antiquated information and requirements, and updates waste load allocations to reflect the current waste load allocation in a discharger’s Virginia Pollution Discharge Elimination System (VPDES) permit.

The proposed amendment to the Roanoke River Basin section (9 VAC 25-720-80 B) establishes a standard format for data presentation and updates the data and information contained in this portion of the regulation to provide consistency with the current VPDES permits.

`Total Maximum Daily Load`

EDITOR'S NOTE: 9 VAC 25-720-80 A is not amended; therefore, the text is not set out. 9 VAC 25-720-80 B is stricken in its entirety and is not set out. The new text for 9 VAC 25-720-80 B is set out below.

B. Non-TMDL waste load allocations.

Statutory Authority: § 62.1-44.15 of the Code of Virginia; Clean Water Act (33 USC 1313 (e)); 40 CFR Part 130.

Public Hearing Dates:
June 6, 2005 - 2 p.m. (Harrisonburg)
June 8, 2005 - 1:30 p.m. (Roanoke)
Public comments may be submitted until July 1, 2005. (See Calendar of Events section for additional information)

Agency Contact: Nancy T. Norton, Department of Environmental Quality, 355 Deadmore Street, Abingdon, VA 24212, telephone (276) 676-4807, FAX (276) 676-4899, or e-mail tnorton@deq.virginia.gov.

Basis: Sections 62.1-44.15 and 62.1-44.19:7 of the Code of Virginia give the State Water Control Board the duty and authority to adopt TMDLs and to establish policies and programs for effective areawide and basinwide water quality control and management. The code also authorizes the board to develop pollution abatement and water quality control plans. Water Quality Management Plans are required by § 303(e) of the Clean Water Act (33 USC § 1313(e)) as implemented by 40 CFR Part 130.

Purpose: The State Water Control Board proposes to amend the Tennessee-Big Sandy River Basin section (9 VAC 25-720-90 B) of the state’s Water Quality Management Plan Regulation (9 VAC 25-720). This section (9 VAC 25-720-90 B) serves as a repository for those waste load allocations not developed in the Total Maximum Daily Load (TMDL) process. The proposed amendment is needed to standardize the format and update the data and information contained in the regulation to reflect the advances in technology and changing water quality conditions. This amendment is needed to provide consistency with VPDES permits and other water quality management programs. Obsolete information will also be removed from the regulation.

Substance: The Tennessee-Big Sandy River Basin (9 VAC 25-720-90 B) section of the Water Quality Management Plan Regulation (9 VAC 25-720) needs a standard format and outdated waste load allocations need to be updated. Obsolete information needs to be deleted from the regulation.

Issues: The amendment to provide a consistent format and data is a benefit for the public interested in the pollutant loads and allocations for Virginia’s streams. Also, the amended regulation will contain current information that is a benefit to all users. The one possible disadvantage to some citizens is that some information not required by the statutory and regulatory authorizations is being eliminated in the amendment. This information will be moved into the nonregulatory river basin plan.

Department of Planning and Budget’s Economic Impact Analysis: The Department of Planning and Budget (DPB) has analyzed the economic impact of this proposed regulation in accordance with § 2.2-4007 H of the Administrative Process Act and Executive Order Number 21 (02). Section 2.2-4007 H requires that such economic impact analyses include, but need not be limited to, the projected number of businesses or

VA.R. Doc. No. R04-123; Filed April 13, 2005, 11:46 a.m.
other entities to whom the regulation would apply, the identity of any localities and types of businesses or other entities particularly affected, the projected number of persons and employment positions to be affected, the projected costs to affected businesses or entities to implement or comply with the regulation, and the impact on the use and value of private property. The analysis presented below represents DPB’s best estimate of these economic impacts.

Summary of the proposed regulation. The General Assembly authorizes the State Water Control Board in § 62.1-44.15 of the Code of Virginia to adopt regulations deemed necessary to enforce the general water quality management program of the board. Water quality management plans are required under § 303 (e) of the federal Clean Water Act.

The proposed regulation amends the section of the existing water quality planning regulation that deals with the Tennessee-Big Sandy River Basin. It establishes a standard format for the presentation of data, removes outdated and antiquated information and requirements, and updates waste load allocations to reflect the current waste load allocation in a discharger’s Virginia Pollution Discharge Elimination System (VPDES) permit.

Estimated economic impact. The proposed regulation amends the section of the existing water quality planning regulation dealing with the Tennessee-Big Sandy River Basin. It establishes a standard format for the presentation of data. According to the Department of Environmental Quality (DEQ), the proposed regulation was promulgated a few years ago to replace 18 separate water quality planning regulations, each with a different format for data presentation. These regulations were grouped together by river basin and incorporated into the proposed regulation. The proposed change is intended to standardize the format for data presentation across all nine river basins. The proposed regulation also removes outdated and antiquated information and requirements from the existing regulation. For example, the consolidation of wastewater treatment plants over the past few years has led to some of the smaller treatment facilities shutting down. The proposed regulation is updated to reflect these and other such changes. Finally, the proposed regulation updates the nonTMDL¹ waste load allocation of facilities discharging into the Tennessee-Big Sandy River Basin. These are updated to reflect the current waste load allocation as established in a discharger’s VPDES permit.

As none of the proposed changes are likely to affect current practice, the proposed regulation is not likely to have a significant economic impact. According to DEQ, the intent of the proposed regulation is to present all information relevant to water quality management planning in the Tennessee-Big Sandy River Basin in one place. In the absence of this regulation, information would have to be collected from individual VPDES permits. To the extent that the proposed changes update the regulation to reflect current conditions and practice and, thus, improve understanding and implementation of the regulation, it could produce some economic benefits.

¹ Total Maximum Daily Load

Businesses and entities affected. There are currently nine facilities with nonTMDL waste load allocations discharging into the Tennessee-Big Sandy River Basin.

Localities particularly affected. The proposed regulation applies to all localities in the area of the Tennessee-Big Sandy River Basin. However, the proposed regulation is not likely to have a significant impact on these localities.

Projected impact on employment. The proposed regulation is not likely to have a significant impact on employment in the Commonwealth.

Effects on the use and value of private property. The proposed regulation is not likely to have a significant impact on the use and value of private property.

Agency’s Response to the Department of Planning and Budget’s Economic Impact Analysis: The department has reviewed the economic impact analysis prepared by the Department of Planning and Budget and has no comment.

Summary:

The proposed amendment to the Tennessee-Big Sandy River Basin section (9 VAC 25-720-90 B) establishes a standard format for data presentation and updates the data and information contained in this portion of the regulation to provide consistency with the current VPDES permits.

VA.R. Doc. No. R04-124; Filed April 13, 2005, 11:45 a.m.

Statutory Authority: § 62.1-44.15 of the Code of Virginia; Clean Water Act (33 USC § 1313 (e)); 40 CFR Part 130.

Public Hearing Dates:
June 6, 2005 - 2 p.m. (Harrisonburg)
June 8, 2005 - 1:30 p.m. (Roanoke)
Public comments may be submitted until July 1, 2005. (See Calendar of Events section for additional information)

Agency Contact: Jason R. Hill, Department of Environmental Quality, 3019 Peters Creek Road, Roanoke, VA 24019, telephone (540) 562-6724, FAX (540) 562-6729, or e-mail jrhill@deq.virginia.gov.

Purpose: The State Water Control Board proposes to amend the New River Basin section (9 VAC 25-720-130 B) of the state's Water Quality Management Plan Regulation (9 VAC 25-720). This section (9 VAC 25-720-130 B) serves as a repository for those waste load allocations not developed in the Total Maximum Daily Load (TMDL) process. The proposed amendment is needed to standardize the format and update the data and information contained in the regulation to reflect the advances in technology and changing water quality conditions. This amendment is needed to provide consistency with VPDES permits and other water quality management programs. Obsolete information will also be removed from the regulation.

Substance: The New River Basin (9 VAC 25-720-130 B) section of the Water Quality Management Plan Regulation (9 VAC 25-720) needs a standard format and outdated waste
load allocations need to be updated. Obsolete information needs to be deleted from the regulation.

Issues: The amendment to provide a consistent format and data is a benefit for the public interested in the pollutant loads and allocations for Virginia’s streams. Also, the amended regulation will contain current information that is a benefit to all users. The one possible disadvantage to some citizens is that some information not required by the statutory and regulatory authorizations is being eliminated in the amendment. This information will be moved into the nonregulatory river basin plan.

Department of Planning and Budget’s Economic Impact Analysis: The Department of Planning and Budget (DPB) has analyzed the economic impact of this proposed regulation in accordance with § 2.2-4007 H of the Administrative Process Act and Executive Order Number 21 (02). Section 2.2-4007 H requires that such economic impact analyses include, but need not be limited to, the projected number of businesses or other entities to whom the regulation would apply, the identity of any localities and types of businesses or other entities particularly affected, the projected number of persons and employment positions to be affected, the projected costs to affected businesses or entities to implement or comply with the regulation, and the impact on the use and value of private property. The analysis presented below represents DPB’s best estimate of these economic impacts.

Summary of the proposed regulation. The General Assembly authorizes the State Water Control Board in § 62.1-44.15 of the Code of Virginia to adopt regulations deemed necessary to enforce the general water quality management program of the board. Water quality management plans are required under § 303 (e) of the federal Clean Water Act.

The proposed regulation amends the section of the existing water quality planning regulation that deals with the New River Basin. It establishes a standard format for the presentation of data, removes outdated and antiquated information and requirements, and updates waste load allocations to reflect the current waste load allocation in a discharger’s Virginia Pollution Discharge Elimination System (VPDES) permit.

Estimated economic impact. The proposed regulation amends the section of the existing water quality planning regulation dealing with the New River Basin. It establishes a standard format for the presentation of data. According to the Department of Environmental Quality (DEQ), the proposed regulation was promulgated a few years ago to replace 18 separate water quality planning regulations, each with a different format for data presentation. These regulations were grouped together by river basin and incorporated into the proposed regulation. The proposed change is intended to standardize the format for data presentation across all nine river basins. The proposed regulation also removes outdated and antiquated information and requirements from the existing regulation. For example, the consolidation of wastewater treatment plants over the past few years has led to some of the smaller treatment facilities shutting down. The proposed regulation is updated to reflect these and other such changes.

Finally, the proposed regulation updates the nonTMDL waste load allocation of facilities discharging into the New River Basin. These are updated to reflect the current waste load allocation as established in a discharger’s VPDES permit.

As none of the proposed changes are likely to affect current practice, the proposed regulation is not likely to have a significant economic impact. According to DEQ, the intent of the proposed regulation is to present all information relevant to water quality management planning in the New River Basin in one place. In the absence of this regulation, this information would have to be collected from individual VPDES permits. To the extent that the proposed changes update the regulation to reflect current conditions and practice and, thus, improve understanding and implementation of the regulation, it could produce some economic benefits.

Businesses and entities affected. There are currently nine facilities with nonTMDL waste load allocations discharging into the New River Basin.

Localities particularly affected. The proposed regulation applies to all localities in the area of the New River Basin. However, the proposed regulation is not likely to have a significant impact on these localities.

Projected impact on employment. The proposed regulation is not likely to have a significant impact on employment in the Commonwealth.

Effects on the use and value of private property. The proposed regulation is not likely to have a significant impact on the use and value of private property.

Agency’s Response to the Department of Planning and Budget’s Economic Impact Analysis: The department has reviewed the economic impact analysis prepared by the Department of Planning and Budget and has no comment.

Summary:

The proposed amendment to the New River Basin section (9 VAC 25-720-130 B) establishes a standard format for data presentation and updates the data and information contained in this portion of the regulation to provide consistency with the current VPDES permits.

VA.R. Doc. No. R04-125; Filed April 13, 2005, 11:44 a.m.

TITLE 13. HOUSING

BOARD OF HOUSING AND COMMUNITY DEVELOPMENT

Notice of Additional Public Comment Period

Titles of Regulations: 13 VAC 5-21. Virginia Certification Standards (amending 13 VAC 5-21-10 through 13 VAC 5-21-70; adding 13 VAC 5-21-45).

13 VAC 5-63. Virginia Uniform Statewide Building Code (USBC) (adding 13 VAC 5-63-10 through 13 VAC 5-63-540).

13 VAC 5-91. Virginia Industrialized Building Safety Regulations (amending 13 VAC 5-91-10, 13 VAC 5-91-20, 13 VAC 5-91-40, 13 VAC 5-91-50, 13 VAC 5-91-70, 13 VAC 5-91-80, 13 VAC 5-91-90, 13 VAC 5-91-110 through 13 VAC 5-91-220, and 13 VAC 5-91-245 through 13 VAC 5-91-270).

The Board of Housing and Community Development noticed a public comment period on the above-referenced proposed regulations in the February 7, 2005, issue of the Virginia Register of Regulations (21:11 VA.R. 1280-1348 February 7, 2005). The board seeks written comments from interested persons on code change proposals received in response to the proposed regulations.

The board has developed a compilation document containing all proposed changes and supporting documentation received during the comment period on the proposed regulations that ended April 11, 2005. The compilation document is available
Proposed Regulations

on the Department of Housing and Community Development's website (http://www.dhcd.virginia.gov) and on other selected websites.

Public comments on the code change proposals may be submitted through June 2, 2005, to Steve Calhoun, Regulatory Coordinator, Department of Housing and Community Development, 501 N. 2nd St., Richmond, VA 23219, telephone (804) 371-7015, FAX (804) 371-7090, or e-mail steve.calhoun@dhcd.virginia.gov.

For additional information or assistance in obtaining the compilation document, contact the department's Division of Building and Fire Regulation at (804) 371-7150.

REGISTRAR'S NOTICE: The Virginia State Bar is exempt from the Administrative Process Act in accordance with § 2.2-4002 A 2 of the Code of Virginia, which exempts courts, any agency of the Supreme Court, and any agency which by the Constitution is expressly granted any of the powers of a court of record.

Agency Contact: Mary Yancey Spencer, Deputy Executive Director, Virginia State Bar, 707 E. Main Street, Suite 1500, Richmond, VA 23219, telephone (804) 775-0575, FAX (804) 775-0501 or e-mail spencer@vsb.org.

Summary:
This regulation was superceded by the adoption of revised Paragraph 13, § IV of Part 6 of the Rules of the Virginia Supreme Court by order dated September 18, 2002; therefore, the regulation is being repealed.

VA.R. Doc. No. R05-173; Filed April 13, 2005, 11:22 a.m.

TITLE 9. ENVIRONMENT

STATE WATER CONTROL BOARD

REGISTRAR’S NOTICE: The following regulatory actions are exempt from the Administrative Process Act in accordance with § 2.2-4006 A 4 c of the Code of Virginia, which excludes regulations that are necessary to meet the requirements of federal law or regulations, provided such regulations do not differ materially from those required by federal law or regulation. The State Water Control Board will receive, consider and respond to petitions by any interested person at any time with respect to reconsideration or revision.

Effective Date: June 1, 2005.

Summary:
This amendment to the state’s Water Quality Management Planning Regulation (9 VAC 25-720) consists of the inclusion of four Total Maximum Daily Load (TMDL) waste load allocations contained in four TMDL reports. The TMDLs were developed in accordance with federal regulations (40 CFR 130.7) and are exempt from the provisions of Article 2 of the Virginia Administrative Process Act. The TMDLs have been through the TMDL public participation process and the waste load allocations are adopted as part of 9 VAC 25-720 in accordance with Virginia’s “Public Participation Procedures for Water Quality Management Planning.”

STATE CORPORATION COMMISSION
Bureau of Insurance
April 1, 2005
Administrative Letter 2005 - 6

TO: All Companies Licensed to Write Insurance as Classified and Defined in Article 2 of Chapter 1 of Title 38.2 of the Code of Virginia and Interested Parties

RE: Change of Electronic Contact Information for the State Corporation Commission's Bureau of Insurance

Please be advised that the electronic contact information for the State Corporation Commission's Bureau of Insurance (the Bureau) has been changed. The new internet web page address is www.scc.virginia.gov. In addition, the e-mail accounts for staff members and for specific departments within the Bureau have been similarly changed. An individual staff member’s e-mail address follows the following format:

firstname.lastname@scc.virginia.gov

The following are e-mail addresses for specific offices within the Bureau:

- General Information: bureauofinsurance@scc.virginia.gov
- Office of the Managed Care Ombudsman: Ombudsman@scc.virginia.gov
- Life and Health Consumer Outreach: L&HOutreach@scc.virginia.gov
- Property and Casualty Consumer Outreach: P&COutreach@Scc.virginia.gov
- Webmaster: webmaster@scc.virginia.gov

These changes were effective on January 1, 2005, and while the former electronic contact information can be utilized until December 31, 2005, after that time the new contact information must be used.

Each company is responsible for notifying its agents of these changes and for making the necessary corrections to all policies, forms, endorsements, correspondence, and notices to policyholders and insureds which contain electronic contact information for the Bureau of Insurance. No changes are necessary for the Bureau's mailing address or telephone numbers. These changes should not be filed with the Bureau of Insurance.

/s/ Alfred W. Gross
Commissioner of Insurance

AT RICHMOND, APRIL 8, 2005
COMMONWEALTH OF VIRGINIA, ex rel.
STATE CORPORATION COMMISSION

CASE NO. BFI-2004-00108

Ex Parte: In re: proposed regulation relating to exemption from loan-to-value limitation for interest-only equity lines

DISMISSAL ORDER

By Order entered in this case on September 1, 2004, the State Corporation Commission ("Commission") directed that notice be given of its proposal, acting pursuant to § 6.1-63 of the Virginia Banking Act, Chapter 2 of Title 6.1 of the Code of Virginia, to promulgate a regulation that would exempt state-chartered banks from the 50% loan-to-value limitation in § 6.1-63 A when extending credit under certain interest-only equity lines secured by residential property. Interested parties were afforded the opportunity to file written comments or request a hearing on or before October 15, 2004. The Virginia Bankers Association and Union Bankshares Corporation both submitted comments indicating that the proposed regulation falls short of creating a level playing field for state-chartered banks relative to national banks.

Thereafter, the 2005 General Assembly enacted Chapter 263, which completely eliminates the 50% loan-to-value limitation in § 6.1-63 A. This legislation will become effective on July 1, 2005.

Having considered Chapter 263 of the 2005 Acts of Assembly, the written comments filed, and Staff recommendations, the Commission finds that the General Assembly has addressed the issues involved in this case and that no further action should be taken in this matter. The Commission further finds that no purpose is served by keeping this matter pending on the active docket until the legislation becomes effective on July 1, 2005.

Accordingly, IT IS ORDERED THAT:

(1) This case is dismissed.

(2) The papers filed herein shall be placed in the file for ended causes.

(3) AN ATTESTED COPY hereof shall be sent to the Registrar of Regulations.

AN ATTESTED COPY hereof shall be sent by the Clerk of the Commission to: Walter C. Ayers, President, Virginia Bankers Association, P.O. Box 462, Richmond, Virginia 23218; Randy K. Ferrell, President and Chief Executive Officer, The Fauquier Bank, P.O. Box 561, Warrenton, Virginia 20188; Peter A. Seitz, Executive Vice President, Union Bankshares Corporation, P.O. Box 446, Bowling Green, Virginia 22427; and to the Commissioner of Financial Institutions.

DEPARTMENT OF CRIMINAL JUSTICE SERVICES
Division of Forensic Science

Approved Breath Test Device

In accordance with 6 VAC 20-190-90 of the Regulations for Breath Alcohol Testing and under the authority of the Code of Virginia, the following breath test device is approved for use in conducting breath tests:

The Intoxilyzer, Model 5000, CD/FG5, equipped with the Virginia test protocol, simulator monitor, and external printer, manufactured by CMI, Inc., Owensboro, Kentucky.
### Approved Supplies and Accessories

In accordance with 6 VAC 20-190-100 of the Regulations for Breath Alcohol Testing and under the authority of the Code of Virginia, the following supplies and accessories may be purchased by an agency for use with the breath test device:

- Mouthpieces that are compatible with the Intoxilyzer, Model 5000, CD/FG5, manufactured by CMI, Inc., Owensboro, Kentucky.

### Approved Preliminary Breath Test Devices

In accordance with 6 VAC 20-190-180 of the Regulations for Breath Alcohol Testing and under the authority of the Code of Virginia, the following devices are approved for use as preliminary breath test devices:

2. The CMI SD 2 and CMI SD 5, manufactured by Lyon Laboratories, Barry, United Kingdom.
3. The INTOXILYZER 400PA, manufactured by CMI, Inc., Owensboro, Kentucky.
4. The LIFELOC PBA 3000* and LIFELOC FC10, manufactured by Lifeloc Inc., Wheat Ridge, Colorado. *(When used in the direct sensing mode only.
5. The ALCOTEST 6510 manufactured by Draeger Safety Diagnostics, Inc., Durango, Colorado.

### List of Approved Field Tests for the Detection of Drugs

In accordance with 6 VAC 20-220-60 of the Regulations for the Approval of Field Tests for Detection of Drugs and under the authority of the Code of Virginia, the following field tests for detection of drugs are approved field tests:

DEPARTMENT OF ENVIRONMENTAL QUALITY

Total Maximum Daily Loads (TMDLs) for Goldmine Creek, Beaver Creek, Mountain Run, Pamunkey Creek, Terrys Run and Plentiful Creek

The Department of Environmental Quality (DEQ) and the Department of Conservation and Recreation seek written and oral comments from interested persons on the development of Total Maximum Daily Loads (TMDLs) to address impairments in the following six watersheds: Goldmine Creek, Beaver Creek, Mountain Run, Pamunkey Creek, Terrys Run and Plentiful Creek. The subject stream segments are identified in Virginia's 2002 303(d) Report on Impaired Waters and the 2004 Virginia Water Quality Assessment 305(b)/303(d) Integrated Report as impaired due to exceedances of the state's water quality criterion for fecal coliform bacteria.

Section 303(d) of the Clean Water Act and § 62.1-44.19:7 C of the Code of Virginia require DEQ to develop TMDLs for pollutants responsible for each impaired water contained in Virginia's 303(d) list.

The impaired stream segments are located in Louisa, Orange and Spotsylvania Counties. The first impairment is a 7.16-mile segment of Goldmine Creek extending from the headwaters of the Creek, near the intersection of Routes 22 and 625, downstream to the confluence with Lake Anna, about 1 mile north of Route 613. The second impairment is a 2.51-mile segment of Beaver Creek extending from the confluence of Cooks Creek and Beaver Creek, approximately 0.68 rivermiles upstream from the Route 638 bridge, downstream to its confluence with the North Anna River, about 1 mile west of Route 669. The third impairment is a 2.52-mile segment of Mountain Run beginning at the confluence of Madison Run and Mountain Run, about 1.5 miles east of Route 15, downstream to its confluence with the North Anna River, about 1 mile south of Route 643. The fourth impairment is a 12.14-mile segment of Pamunkey Creek extending from the confluence of Tomahawk Creek and Church Creek (where Pamunkey Creek begins), near the intersection of Routes 612 and 631, downstream to the confluence with Lake Anna, about 1 mile east of Route 651. The fifth impairment is a 5.45-mile segment of Terrys Run extending from the confluence of Horsepen Branch to Terrys Run, near Route 619, downstream to the confluence with Lake Anna, near Route 651. The sixth impairment is a 3.15-mile segment of Plentiful Creek extending from the confluence of an unnamed tributary to Plentiful Creek, near Route 601, downstream to the confluence with Lake Anna, about 1 mile south of Route 653.

The third and final public meeting on the development of the Goldmine Creek, Beaver Creek, Mountain Run, Pamunkey Creek, Terrys Run and Plentiful Creek Bacteria TMDLs will be held on Tuesday, May 24, 2005, at 7 p.m. at Prospect Heights Middle School, located at 300 Macon Road in Orange, Virginia.

The public comment period will begin on May 24, 2005, and end on June 23, 2005. Fact sheets on the development of the TMDLs for the impairments referenced are available upon request. Questions or information requests should be addressed to Kimberly Davis. Written comments should include the name, address, and telephone number of the person submitting the comments and should be sent to Ms. Kimberly Davis, Department of Environmental Quality, 13901 Crown Court, Woodbridge, VA 22193, telephone (703) 583-3937, FAX (703) 583-3841, or e-mail kvdavis@deq.virginia.gov.
General Notices/Errata

Total Maximum Daily Loads (TMDLs) for Mountain Run and Mine Run Watersheds

The Department of Environmental Quality (DEQ) and the Department of Conservation and Recreation seek written and oral comments from interested persons on the development of Total Maximum Daily Loads (TMDLs) to address impairments in the Mountain Run and Mine Run watersheds. The subject stream segments are identified in Virginia's 2002 303(d) Report on Impaired Waters and the 2004 Virginia Water Quality Assessment 305(b)/303(d) Integrated Report as impaired due to exceedances of the state’s water quality criterion for fecal coliform bacteria.

Section 303(d) of the Clean Water Act and § 62.1-44.19:7 C of the Code of Virginia require DEQ to develop TMDLs for pollutants responsible for each impaired water contained in Virginia's 303(d) list.

The impaired stream segments are located in Orange County. The first impairment is a 9.79-mile segment of Mountain Run that extends from the confluence of Mill Run to Mountain Run, approximately 0.25 rivermiles downstream of Route 617, downstream to its confluence with Mine Run, near the Orange County line. The second impairment is a 9.95-mile segment of Mine Run that extends from the confluence of Cormack Run to Mine Run, approximately 0.6 rivermiles upstream of Route 20, and continues downstream to its confluence with the Rapidan River, at the Orange County line.

The third and final public meeting on the development of the Mountain Run and Mine Run Bacteria TMDLs will be held on Wednesday, May 18, 2005, at 7 p.m. at Unionville Elementary School, located at 10285 Zachary Taylor Highway (Rt. 522) in Unionville, Virginia.

The public comment period will begin on May 18, 2005, and end on June 16, 2004. Fact sheets on the development of the TMDLs for the impairments referenced are available upon request. Questions or information requests should be addressed to Kimberly Davis. Written comments should include the name, address, and telephone number of the person submitting the comments and should be sent to Ms. Kimberly Davis, Department of Environmental Quality, 13901 Crown Court, Woodbridge, VA 22193, telephone (703) 583-3937, FAX (703) 583-3841, or e-mail kvdavis@deq.virginia.gov.

Total Maximum Daily Load (TMDL) for Sheep Creek, Elk Creek, Machine Creek, Little Otter River in Bedford County, and Big Otter River in Campbell County

The Department of Environmental Quality (DEQ) and the Department of Conservation and Recreation seek written and oral comments from interested persons on the development of an Implementation Plan (IP) for the Total Maximum Daily Load (TMDL) for fecal coliform bacteria on a 7.3-mile segment of Sheep Creek, 7.5-mile segment on Elk Creek, 20-mile segment on Machine Creek, 27.2-mile segment of Little Otter River in Bedford County, and a 14.8-mile segment on the Big Otter River in Campbell County. TMDLs for the five impaired stream segments were approved by EPA in February 2001 and are available on DEQ’s website at http://www.deq.state.va.us/tmdlrpts.html.

Section 62.1-44.19:7 C of the Code of Virginia requires the development of an IP for approved TMDLs. The IP should provide measurable goals and the date of expected achievement of water quality objectives. The IP should also include the corrective actions needed and their associated costs, benefits and environmental impacts.

The first public meeting on the development of the IP for the Sheep Creek, Elk Creek, Machine Creek, Little Otter River and Lower Big Otter River fecal coliform bacteria TMDLs will be held on Thursday, May 19, 2005, at 7 p.m. in the Bedford
Welcome Center, located at the intersection of US 460 and US 122 behind the D-Day Memorial.

The public comment period will end on June 19, 2005. A fact sheet on the development of an IP for Sheep Creek, Elk Creek, Machine Creek, Little Otter River and Lower Big Otter River is available upon request. Questions or information requests should be addressed to Theresa Carter. Written comments and inquiries should include the name, address, and telephone number of the person submitting the comments and should be sent to Ms. Theresa Carter, Department of Conservation and Recreation, 252 W. Main Street, Suite 3, Abingdon, VA 24210, telephone (276) 676-5418, FAX (276) 676-5527, or e-mail theresa.carter@dcr.virginia.gov.

STATE LOTTERY DEPARTMENT

Director's Orders

The following Director's Orders of the State Lottery Department were filed with the Virginia Registrar of Regulations on April 6, 2005. The orders may be viewed at the State Lottery Department, 900 E. Main Street, Richmond, Virginia, or at the office of the Registrar of Regulations, 910 Capitol Street, 2nd Floor, Richmond, Virginia.

Final Rules for Game Operation:

Director's Order Number Twenty-Two (05)
Virginia's Instant Game Lottery 328; "Diamond Bingo" (effective 3/29/05)

Director's Order Number Twenty-Three (05)
Virginia's Instant Game Lottery 660; "Hearts" (effective 3/29/05)

Director's Order Number Twenty-Four (05)
Virginia's Instant Game Lottery 609; "$500,000 Payout" (effective 3/29/05)

Director's Order Number Twenty-Five (05)
Virginia's Instant Game Lottery 665; "Stacks of Cash" (effective 3/29/05)

Director's Order Number Twenty-Seven (05)
Virginia's Instant Game Lottery 661; "Lucky Stars" (effective 3/29/05)

DEPARTMENT OF MEDICAL ASSISTANCE SERVICES

Notice of Intent to Modify Medicaid Co-Pay Structure: Increased Cost-Sharing Measures

Notice is hereby given that the Department of Medical Assistance Services (DMAS) intends to modify its Medicaid co-payment structure pursuant to the department's authority under Title XIX of the Social Security Act. This notice is intended to satisfy the requirements of 42 CFR 447.205 and of § 1902(a)(13) of the Social Security Act, 42 USC § 1396a(a)(13). The changes contained in this public notice are occurring in response to Chapter 4 of the 2004 Acts of the Assembly, Item 326 EEE directing DMAS to increase recipient cost-sharing measures to meet target savings.

As directed by the Act, on October 1, 2004, DMAS reported on a plan to increase cost-sharing requirements that would meet the savings targets. The plan proposed to increase the amount of patient co-payments on certain services where cost sharing already exists and to initiate co-payments on certain services that do not currently have cost-sharing requirements. The proposed Medicaid co-payment amounts are permissible under federal regulations, which stipulate that the state may require nominal co-payments (i.e., $0.50 - $3.00) based on the typical state payment for the service. The proposed change will increase the co-payments for clinic visits and eye exams from $1 to $2, and will apply to both medically and categorically needy Medicaid recipients. Providers of these services are responsible to collect co-payments, which amounts are withheld from their reimbursement.

A copy of this notice is available for public review from Tom Edicola, Director, Program Operations Division, DMAS, 600 Broad Street, Suite 1300, Richmond, VA 23219, and this notice is available for public review at www.townhall.state.va.us. Comments or inquiries may be submitted, in writing, within 30 days of this notice publication to Mr. Edicola and such comments are available for review at the same address.

STATE WATER CONTROL BOARD

Proposed Consent Special Order - Sandy’s Mobile Home Community, L.L.C.

The State Water Control Board proposes to enter into a consent special order with the Sandy’s Mobile Home Community, L.L.C., to resolve violations of the State Water Control Law and regulations at Sandy’s wastewater treatment plant in Frederick County, Virginia. The facility discharges to an unnamed tributary to Crooked Run in the Shenandoah River subbasin, Potomac River basin.

The STP has experienced CBOD, TSS, pH and ammonia effluent limitation violations during the period from March 2004 through January 2005.

The proposed consent special order settles an outstanding Notice of Violation and incorporates a schedule of compliance to ensure consistent compliance with all the Permit requirements.

The board will receive written comments relating to the proposed consent special order for 30 days from the date of publication of this notice. Comments should be addressed to Steven W. Hetrick, Department of Environmental Quality, Post Office Box 3000, Harrisonburg, Virginia 22801, and should refer to the consent special order. Comments may also be submitted via electronic mail to swhetrick@deq.virginia.gov. In order to be considered, electronic comments must be received prior to the close of the comment period and must include the name, address, and telephone number of the person making the comment.
General Notices/Errata

The proposed order may be examined at the Department of Environmental Quality, Valley Regional Office, 4411 Early Road, Harrisonburg, VA 22801. A copy of the order may be obtained in person or by mail from this office.

VIRGINIA CODE COMMISSION

Notice to State Agencies

Mailing Address: Virginia Code Commission, 910 Capitol Street, General Assembly Building, 2nd Floor, Richmond, VA 23219, FAX (804) 692-0625.

NOTICE
Only those meetings which are filed with the Registrar of Regulations by the filing deadline noted at the beginning of this publication are listed. Since some meetings are called on short notice, please be aware that this listing of meetings may be incomplete. Also, all meetings are subject to cancellation and the Virginia Register deadline may preclude a notice of such cancellation. If you are unable to find a meeting notice for an organization in which you are interested, please check the Commonwealth Calendar at www.vipnet.org or contact the organization directly.

For additional information on open meetings and public hearings held by the standing committees of the legislature during the interim, please call Legislative Information at (804) 698-1500 or Senate Information and Constituent Services at (804) 698-7410 or (804) 698-7419/TTY, or visit the General Assembly web site's Legislative Information System (http://leg1.state.va.us/lis.htm) and select "Meetings."

VIRGINIA CODE COMMISSION

EXECUTIVE

BOARD OF ACCOUNTANCY

May 8, 2005 - Public comments may be submitted until this date.

Notice is hereby given in accordance with § 2.2-4007 of the Code of Virginia that the Board of Accountancy intends to amend regulations entitled 18 VAC 5-21, Board of Accountancy Regulations. The purpose of the proposed action is to revise and clarify (i) qualifications for licensure including new language about the current computer-based CPA exam and (ii) continuing professional education (CPE) requirements for initial applicants and regulants in ethics.

Contact: Nancy Taylor Feldman, Executive Director, Board of Accountancy, 3600 W. Broad St., Richmond, VA 23230, telephone (804) 367-8505, FAX (804) 367-2174 or e-mail boa@boa.virginia.gov.

June 29, 2005 - 10 a.m. -- Open Meeting
Department of Professional and Occupational Regulation, 3600 West Broad Street, Room 395, Richmond, Virginia (Interpreter for the deaf provided upon request)

A meeting to discuss general business matters. A public comment period will be held at the beginning of the meeting. All meetings are subject to cancellation. The time of the meeting is subject to change. Any person desiring to attend the meeting and requiring special accommodations or interpreter services should contact the board at least 10 days prior to the meeting so suitable arrangements can be made. The board fully complies with the Americans with Disabilities Act.

Contact: Nancy Taylor Feldman, Executive Director, Board of Accountancy, 3600 W. Broad St., Suite 378, Richmond, VA 23230, telephone (804) 367-8505, FAX (804) 367-2174, (804) 367-9753/TTY, e-mail boa@boa.virginia.gov.

COMMONWEALTH COUNCIL ON AGING

May 19, 2005 - 10 a.m. -- Open Meeting
Department for the Aging, 1610 Forest Avenue, Suite 100, Richmond, Virginia (Interpreter for the deaf provided upon request)

A regular business meeting. Public comments are welcome.

Contact: Marsha Mucha, Department for the Aging, 1610 Forest Ave., Suite 100, Richmond, VA 23229, telephone (804) 662-9312.

DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES

Consumer Affairs Advisory Committee

May 11, 2005 - 9:30 a.m. -- Open Meeting
Department of Agriculture and Consumer Services, Washington Building, 1100 Bank Street, 2nd Floor, Board Room, Richmond, Virginia (Interpreter for the deaf provided upon request)

The advisory committee communicates the views and interests of Virginians on issues related to the Department of Agriculture and Consumer Services' consumer education and fraud prevention programs and their availability to citizens. A meeting to (i) review the consumer education outreach efforts for the past six months and (ii) assist with planning for similar efforts for the remainder of 2005. Members will entertain public comment at the conclusion of all other business for a period not to exceed 30 minutes. Any person who needs any accommodation in order to participate at the meeting should contact Evelyn A. Jez at least five days before the meeting date so that suitable arrangements can be made.

Contact: Evelyn A. Jez, Ph.D., Consumer Affairs Specialist, Department of Agriculture and Consumer Services, 1100 Bank St., Suite 1101, Richmond, VA, telephone (804) 786-1308, FAX (804) 786-5112, toll-free (800) 552-9963, (800) 828-1120/TTY, e-mail penny.jez@vdacs.virginia.gov.
Calendar of Events

STATE AIR POLLUTION CONTROL BOARD

† May 5, 2005 - 7 p.m. -- Public Hearing
Danville Regional Airport, Intersection of Highways 58 and 29, Danville, Virginia.¶

A public hearing to receive comment on air quality issues concerning an application from Yorktowne Cabinetry, Inc. to construct a wood-manufacturing facility in the Cane Creek Centre Industrial Park in Pittsylvania County. An informational briefing will be held at 6:30 p.m. The public comment period closes on May 20, 2005.

Contact: Margaret Key, Department of Environmental Quality, 7705 Timberlake Rd., Lynchburg, VA 24502, telephone (434) 582-5120, e-mail smkey@deq.virginia.gov.

May 5, 2005 - Public comments may be submitted until this date.

Notice is hereby given in accordance with § 2.2-4007 of the Code of Virginia that the State Air Pollution Control Board intends to adopt regulations entitled 9 VAC 5-230, Variance for International Paper Franklin Paper Mill. The purpose of the proposed action is to provide relief for the IP Franklin Paper Mill from the state regulations governing new source review and to establish sitewide emission caps for particulate matter (PM and PM10), sulfur dioxide, oxides of nitrogen, carbon monoxide, volatile organic compounds, total reduced sulfur, lead, sulfuric acid mists and fluorides. The sitewide emission caps would be used as alternative means of compliance with state regulations governing new source reviews (Article 4 of Chapter 50, and Articles 6, 8 and 9 of Chapter 80).

Contact: Robert Mann, Director of Air Regulatory Development, Department of Environmental Quality, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4419, FAX (804) 698-4510, toll-free 1-800-592-5482 or e-mail ramann@deq.virginia.gov.

May 19, 2005 - 9 a.m. -- Public Hearing
Department of Environmental Quality, 629 East Main Street, Richmond, Virginia.¶

The Department of Environmental Quality will hold a public hearing on three proposed revisions to the Commonwealth of Virginia State Implementation Plan (SIP). The proposed revisions consist of amendments to existing regulation provisions concerning maintenance and nonattainment areas. The amendments consist of (i) Revision O97, geographical redefinition of maintenance areas to be consistent with the federal Clean Air Act and the redesignation of the Hampton Roads Ozone Nonattainment Area to maintenance for the one-hour ozone standard, adopted September 11, 1997, effective January 1, 1998; (ii) Revision R97, redesignation of the Richmond Ozone Nonattainment Area to maintenance for the one-hour ozone standard, adopted January 8, 1998, effective April 1, 1998; and (iii) Revision A98, removing the White Top Mountain Ozone Nonattainment Area, adopted September 17, 1998, effective January 1, 1999. The department is seeking comment on the issue of whether the regulation amendments should be submitted to the U.S. Environmental Protection Agency as a revision to the SIP.

Contact: Karen G. Sabasteanski, Department of Environmental Quality, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4426, FAX (804) 698-4510, e-mail kgsabastea@deq.virginia.gov.

† May 25, 2005 - 2 p.m. -- Open Meeting
Department of Environmental Quality, Piedmont Regional Office, 4949-A Cox Road, Glen Allen, Virginia.¶

A public meeting to receive comments on a Notice of Intent to adopt a VPDES general watershed permit for total nitrogen and total phosphorus discharges and nutrient trading in the Chesapeake Bay Watershed in Virginia. The Notice of Intent will be published in the Virginia Register of Regulations on May 2, 2005.

Contact: Allan Brockenbrough, Department of Environmental Quality, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4147, FAX (804) 698-4032, e-mail abrockenbrough@deq.virginia.gov.

† June 22, 2005 - 9:30 a.m. -- Open Meeting
Department of Environmental Quality, Piedmont Regional Office, 4949-A Cox Road, Glen Allen, Virginia.¶

A regular board meeting.

Contact: Cindy Berndt, Regulatory Coordinator, Department of Environmental Quality, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4378, FAX (804) 698-4346, e-mail cmberndt@deq.virginia.gov.

ALCOHOLIC BEVERAGE CONTROL BOARD

Department of Environmental Quality, Tidewater Regional Office, 5636 Southern Boulevard, Virginia Beach, Virginia.

June 3, 2005 - Public comments may be submitted until this date.
Notice is hereby given in accordance with § 2.2-4007 of the Code of Virginia that the State Water Control Board intends to adopt regulations entitled 9 VAC 25-780, Local and Regional Water Supply Planning. The purpose of the proposed action is to establish a basic set of criteria that each local or regional water supply plan must contain so that the entity can plan for and provide adequate water to its citizens.
Contact: Scott W. Kudlas, State Water Control Board, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4456, FAX (804) 698-4347, e-mail swkudlas@deq.virginia.gov.

May 24, 2005 - 2 p.m. -- Open Meeting
Department of Environmental Quality, South Central Regional Office, 7705 Timberlake Road, Lynchburg, Virginia.
A public meeting to receive comments on the State Water Control Board’s Notice of Intent to consider amending the Water Quality Standards. The amendments would designate certain tributaries of the Pedlar and North Fork of the Buffalo Rivers and a portion of the North Fork of the Buffalo Rivers as exceptional state waters. The Notice of Intent is to be published in the Virginia Register of Regulations on April 18, 2005. The comment period begins with publication in the Virginia Register of Regulations and closes on May 27, 2005.
Contact: David C. Whitehurst, State Water Control Board, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4121, FAX (804) 698-4522, e-mail dcwhitehurst@deq.virginia.gov.

† May 25, 2005 - 2 p.m. -- Open Meeting
Department of Environmental Quality, Piedmont Regional Office, 4949-A Cox Road, Glen Allen, Virginia.
A public meeting to receive comments on the Notice of Intent (NOIRA) to adopt a general VPDES watershed permit regulation establishing annual maximum VPDES permitted point source discharge limitations for total nitrogen and total phosphorus to the Chesapeake Bay Watershed and a nutrient-trading mechanism. The NOIRA will appear in the Virginia Register of Regulations on May 2, 2005, and the comment period closes on July 1, 2005.
Contact: Allan Brockenbrough, State Water Control Board, P.O. Box 10009, Richmond, VA 23240, telephone (804) 698-4147, FAX (804) 698-4032, e-mail abrockenbrough@deq.virginia.gov.

† June 6, 2005 - 2 p.m. -- Public Hearing
Department of Environmental Quality, Valley Regional Office, 4411 Early Road, Harrisonburg, Virginia.
† June 8, 2005 - 1:30 p.m. -- Public Hearing
Department of Environmental Quality, West Central Regional Office, 3019 Peters Creek Road, Roanoke, Virginia.
Notice is hereby given in accordance with § 2.2-4007 of the Code of Virginia that the State Water Control Board intends to amend regulations entitled 9 VAC 25-720, Water Quality Management Planning Regulation. The purpose of the proposed action is to amend the New River Basin section (9 VAC 25-720-130) to update the stream segment classifications, effluent limitations and waste load allocations that have changed to reflect new requirements or changing water quality conditions.
Statutory Authority: § 62.1-44.15 of the Code of Virginia; Clean Water Act (33 USC § 1313 (e)); 40 CFR Part 130.
Public comments may be submitted until July 1, 2005.
Contact: Jason R. Hill, Department of Environmental Quality, 3019 Peters Creek Rd., Roanoke, VA 24019, telephone (540) 562-6724, FAX (540) 562-6729 or e-mail jrhill@deq.virginia.gov.
